AM/FM Stereo Receiver with 3-Disc CD Auto Changer

The newest Denon super micro component system, the D-M10 features a powerful tuner/amplifier, along with a 3 disc CD changer. Designed to fit in spaces where conventional full-sized audio components and speakers could not fit, the D-M10 system provides outstanding musical fidelity and the utmost in operating convenience. Ideal for offices and business, as well as for home use in the bedroom or library, the D-M10 system occupies so little space, yet provides so much sound quality and features.

The AM/FM radio and amplifier component features 40 watts of power per channel, more than enough to provide room-filling sound. A clock and timer function makes the set ideal for a bedroom system, and can also be used for unattended off-air recording. The 3 disc CD changer includes all of the features of full-size models, with an individual tray for each of the 3 discs. And for the future, whenever you want to add a MD deck or cassette deck, the D-M10 is equipped with 4 sets of input terminals and 2 sets of output terminals to let you easily expand your system.

DMD-M10 MiniDisc Recorder (Option)

Dimensions/Weight: 210 (W) x 95 (H) x 320 (D) mm, 2.7 kg

■ A Wealth of Easy-to-use MD Editing Functions

The DMD-M10 offers Program Move, which lets you move a number of tracks together, and Undo, to cancel the most recent operation. Auto Rec Pause automatically puts the recorder in Record Pause mode when you first insert a blank MiniDisc. Disc Name Erase and Track Name Erase erases the name of a disc or track, while All Erase erases the entire disc all at once.

Of course, the DMD-M10 also provides all the basic MD editing functions, such as Divide, Combine and Move. Since frequent use of MD editing functions tends to reduce the amount of available recording time on a disc, one extremely handy function is Auto Disc Recovery, which restores most of the original recording time on a disc. Auto Disc Recovery reorganizes the TOC (Table Of Contents) data and restores the disc close to its condition as a new blank MD.

■ Pick Rec Function

If you wish to record a particular track from a CD that you're listening to, the MD Pick Rec function records that track from its beginning.

■ CD-SRS for One-Touch Recording from CD

■ Jog Dial for Easy Entry of Title Data

Up to 100 characters, including letters of the alphabet, numbers and symbols can be used to enter disc names, track names, artist names and other information onto your recorded MDs. The DMD-M10's jog dial makes this process easy and quick.
