### SPECIFICATIONS

#### COMPACT DISC PLAYER

|                       |  |
|-----------------------|--|
| System                | Compact disc digital audio system  |
| Disc                  | Compact disc   |
| Laser                 | Semiconductor laser ( $\lambda = 780 \text{ nm}$ )   |
| Laser output          | Max. 0.4 mW*   |
|                       | *This output is the value measured at a distance of about 1.6 mm from the objective lens surface on the Optical Pick-up Block. |
| Spindle speed         | 200 rpm to 500 rpm (CLV)   |
| Scan velocity         | 1.2–1.4 m/sec.   |
| Error correction      | Sony Super Strategy Cross Interleave Reed Solomon Code   |
| Number of channel     | Two  |
| D/A conversion        | 16-bit linear  |
| Frequency response    | 2 – 20,000 Hz $\pm 0.3 \text{ dB}$   |
| Signal to noise ratio | More than 106 dB   |
| Dynamic range         | More than 97 dB  |
| Harmonic distortion   | Less than 0.0025% (1 kHz)  |
| Channel separation    | More than 100 dB (1 kHz)   |
| Wow and flutter       | Below measurable limit   |
| Output jacks          |  |

#### Disc

|                    |                                    |
|--------------------|------------------------------------|
| Track pitch        | 1.6 $\mu\text{m}$                  |
| Sampling frequency | 44.1 kHz                           |
| Quantization       | 16 bit linear quantizing/channel   |
| Modulation system  | EFM                                |
| Transfer rate      | 2.03 Mbit/sec. (before modulation) |

— Continued on page 2 —

#### SAFETY-RELATED COMPONENT WARNING!!

COMPONENTS IDENTIFIED BY SHADING AND MARK ON THE SCHEMATIC DIAGRAMS AND IN THE PARTS LIST ARE CRITICAL TO SAFE OPERATION. REPLACE THESE COMPONENTS WITH SONY PARTS WHOSE PART NUMBERS APPEAR AS SHOWN IN THIS MANUAL OR IN SUPPLEMENTS PUBLISHED BY SONY.

#### ATTENTION AU COMPOSANT AYANT RAPPORT À LA SÉCURITÉ!

LES COMPOSANTS IDENTIFIÉS PAR UNE TRAME ET UNE MARQUE SUR LES DIAGRAMMES SCHÉMATIQUES ET LA LISTE DES PIÈCES SONT CRITIQUES POUR LA SÉCURITÉ DE FONCTIONNEMENT. NE REMPLACER CES COMPOSANTS QUE PAR DES PIÈCES SONY DONT LES NUMÉROS SONT DONNÉS DANS CE MANUEL OU DANS LES SUPPLÉMENTS PUBLIÉS PAR SONY.

**FEATURES****Direct selection**

You can play a desired selection simply by pressing the corresponding numeric button (1-20).

**Program play**

You can play up to 20 selections in the desired order. Selections can be programmed even after play begins.

**Variety of playing modes**

Disc, program, single, shuffle and repeat playing modes.

**Large and easy-to-read window display**

Shows the elapsed playing time, the remaining time of the selection being played, the remaining time of the whole disc or remaining programmed selection numbers.

**High quality sound**

Ceramic resin deadening chassis is employed in the driving mechanism of the optical pick-up to avoid mechanical vibration. This assures exact signal reading from the track recorded on the compact disc.

US, Canadian model: AC: 120 V ~ 60 Hz 20 W  
AEP model: AC: 220 V ~ 50/60 Hz 20 W

**SAFETY CHECK-OUT (US Model)**

After correcting the original service problem, perform the following safety check before releasing the set to the customer:

Check the antenna terminals, metal trim, "metallized" knobs, screws, and all other exposed metal parts for AC leakage. Check leakage as described below.

**LEAKAGE TEST**

The AC leakage from any exposed metal part to earth ground and from all exposed metal parts to any exposed metal part having a return to chassis, must not exceed 0.5 mA (500 microampers). Leakage current can be measured by any one of three methods.

1. A commercial leakage tester, such as the Simpson 229 or RCA WT-540A. Follow the manufacturers' instructions to use these instruments.
2. A battery-operated AC milliammeter. The Data Precision 245 digital multimeter is suitable for this job.
3. Measuring the voltage drop across a resistor by means of a VOM or battery-operated AC voltmeter. The "limit" indication is 0.75 V, so analog meters must have an accurate low-voltage scale. The Simpson 250 and Sanwa SH-63Trd are examples of a passive VOM that is suitable. Nearly all battery operated digital multimeters that have a 2V AC range are suitable. (See Fig. A)

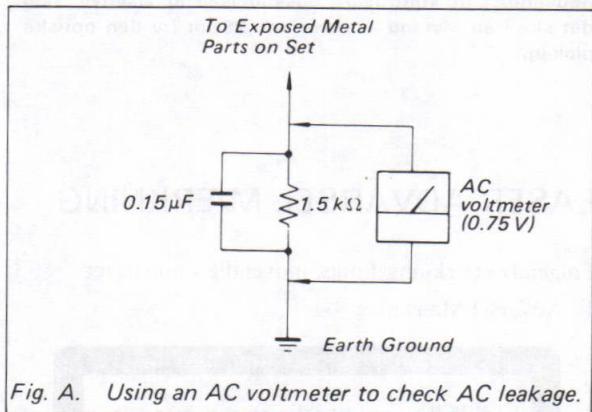

Fig. A. Using an AC voltmeter to check AC leakage.

## PROTECTION OF EYES FROM LASER BEAM DURING SERVICING

This set employs a laser. Therefore, be sure to follow carefully the instructions below when servicing.

### **WARNING !!**

**WHEN SERVICING, DO NOT APPROACH THE LASER EXIT WITH THE EYE TOO CLOSELY. IN CASE IT IS NECESSARY TO CONFIRM LASER BEAM EMISSION, BE SURE TO OBSERVE FROM A DISTANCE OF MORE THAN 25 cm FROM THE SURFACE OF THE OBJECTIVE LENS ON THE OPTICAL PICK-UP BLOCK.**

### **CAUTION:**

The use of optical instrument with this product will increase eye hazard.

#### **CAUTION**

Use of controls or adjustments or performance of procedures other than those specified herein may result in hazardous radiation exposure.

## BESKYTTELSE AF ØJNE MOD LASERSTRÅLING UNDER SERVICE

I dette apparat anvendes laserlys. Derfor skal nedenstående instruktioner nøje følges under service.

Følg iøvrigt instruktionerne i servicemanualen.

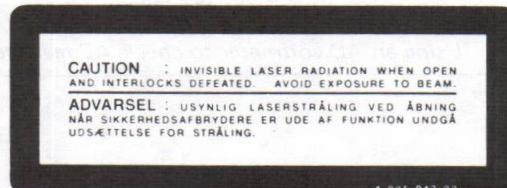

### **ADVARSEL!!**

Under service må øjnene ikke komme nær objektiv-linsen på den optiske pick-up enhed. I tilfælde af at det er nødvendigt at kontrollere udsendelsen af laserlys, skal det ske i en afstand af mere end 25 cm fra den optiske pick-up.

## LASER ADVARSEL MÆRKNING

Følgende mærkning findes indvendig i apparatet:

### 1. Advarsel Mærkning

### 1. Laser Diode Properties

- Material: GaAlAs
- Wavelength: 780 nm
- Emission Duration: continuous
- Laser Output: max. 0.4 mW\*

\* This output is the value measured at a distance of about 1.6 mm from the objective lens surface on the Optical Pick-up Block.

- Classification: Class IIIb.

2. During service, do not take the Optical Pick-up Block apart, and do not adjust the APC circuit. If there is a breakdown in the APC circuit (including laser diode), replace the entire Optiocal Pick-up Block (including APC board).

### 1. Laser-didoe data

- Materiale: GaAlAs
- Bølgelængde: 780 nm
- Udstråling: Kontinuerlig
- Laseroutput: Max. 0,4 mW\*

\* Målt i 1,6 mm afstand fra overfladen af objektiv-linsen på den optiske pick-up enhed.

- Klassifikation: Klasse IIIb.

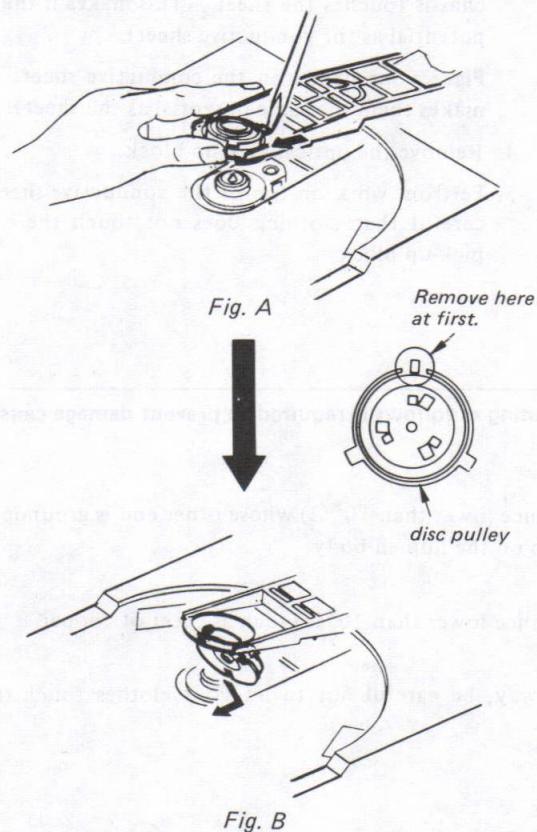

2. Adskil aldrig den optiske pick-up enhed under service, og juster ikke APC kredsløbet (Automatic Power Control). Hvis APC kredsløbet (incl. laser-dioden) bryder ned, skal hele den optiske pick-up enhed (incl. APC printkortet) udskiftes.

**VAROITUS:** Laite sisältää, laserdiodin, joka lähetää (näkymätöntä) silmille vaarallista lasersateilyä.

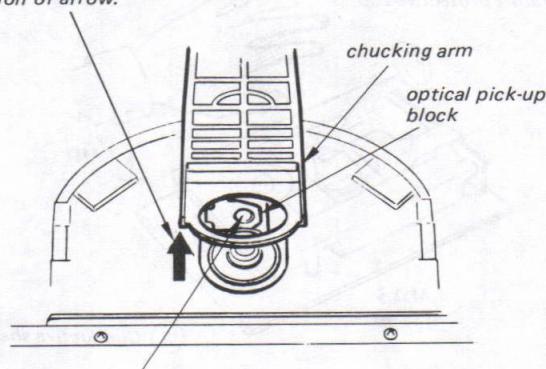

## — SERVICING NOTE —

## LASER DIODE AND FOCUS SERCH OPERATION CHECK

1. Remove disc pulley by lifting up chucking arm by hand. (Fig. A, B)
2. Make POWER switch on with no disc inserted and disc table closed.
3. Confirm that the operation indicated in Fig. C is performed while observing the objecting lens.

Lift up chucking arm by hand in the direction of arrow.

- 1 Confirm that laser beam is spread.
- 2 Up and down motion of the objective lens. (3 times)

Fig. C

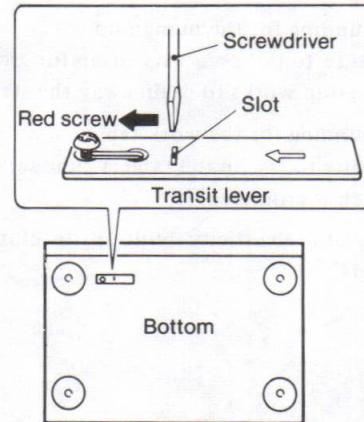

## NOTES ON LASER DIODE EMISSION CHECK

The laser beam on this model is concentrated so as to be focused on the disc reflective surface by the objective lens in the optical pick-up block. Therefore, when checking the laser diode emission, observe more than 25 cm away from the objective lens.

## NOTE ON THE TRANSIT LEVER

A transit lever is provided at the bottom of the unit to protect the optical system against shock during transportation. Before operating the CD player, be sure to move the lever in the direction of the arrow and secure it.

- 1 Loosen the red screw with a screwdriver.
- 2 Insert the screwdriver into the slot in the lever and move it in the direction of the arrow until it stops.
- 3 Tighten the red screw.

When transporting the unit again, move the lever in the opposite direction of the arrow and secure it with the screw.

## — CAUTION FOR ELECTROSTATIC BREAKDOWN —

### NOTES ON HANDLING THE BASE UNIT (BU-1E)

The laser diode in the optical pick-up block may suffer electrostatic breakdown because of the potential difference generated by the charged electrostatic load, etc. on clothing and the human body.

The printed matter below is included in the repair parts. During repair, use the procedure in the printed matter.

The following method is an example for reference purposes:

1. Place a conductive sheet on the workbench.  
(The black sheet used as repair parts wrapping).
2. Place the set on the conductive sheet so that the chassis touches the sheet. (This makes it the same potential as the conductive sheet).
3. Place your hands on the conductive sheet. (This makes them the same potential as the sheet).
4. Remove the optical pick-up block.
5. Perform work on top of the conductive sheet. Be careful that clothing does not touch the optical pick-up block.

#### Printed Matter Included in the Repair Parts

**When opening or repairing a BU-1E, the procedure for grounding as follows is required to prevent damage caused by static electricity.**

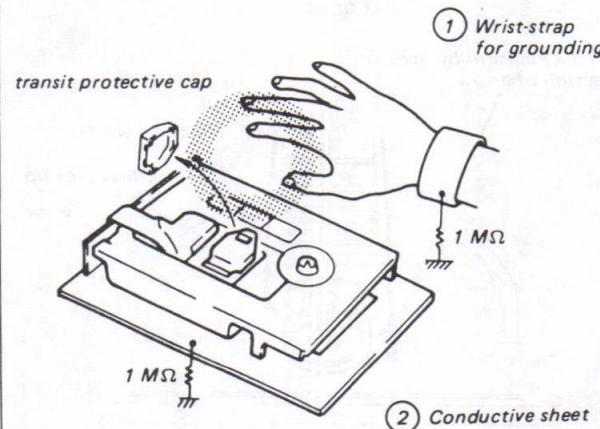

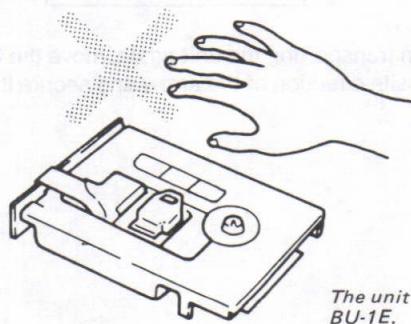

1. Grounding for the human body.

Be sure to put on a wrist-strap for grounding (with impedance lower than  $10^8 \Omega$ ) whose other end is grounded. The strap works to drain away the static electricity built-up on the human body.

2. Grounding for the work table.

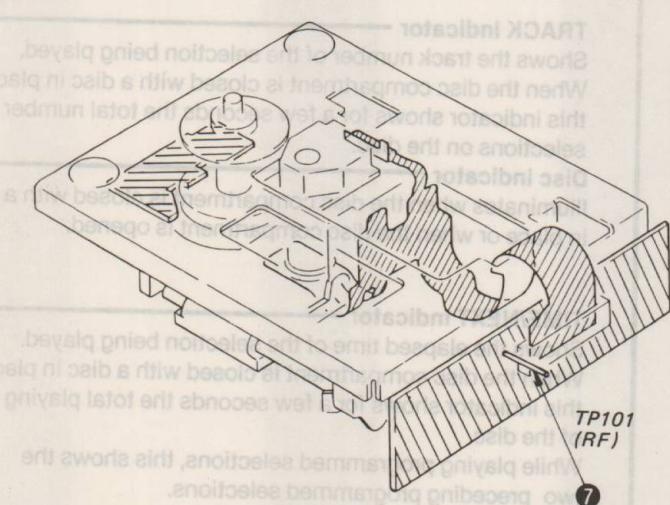

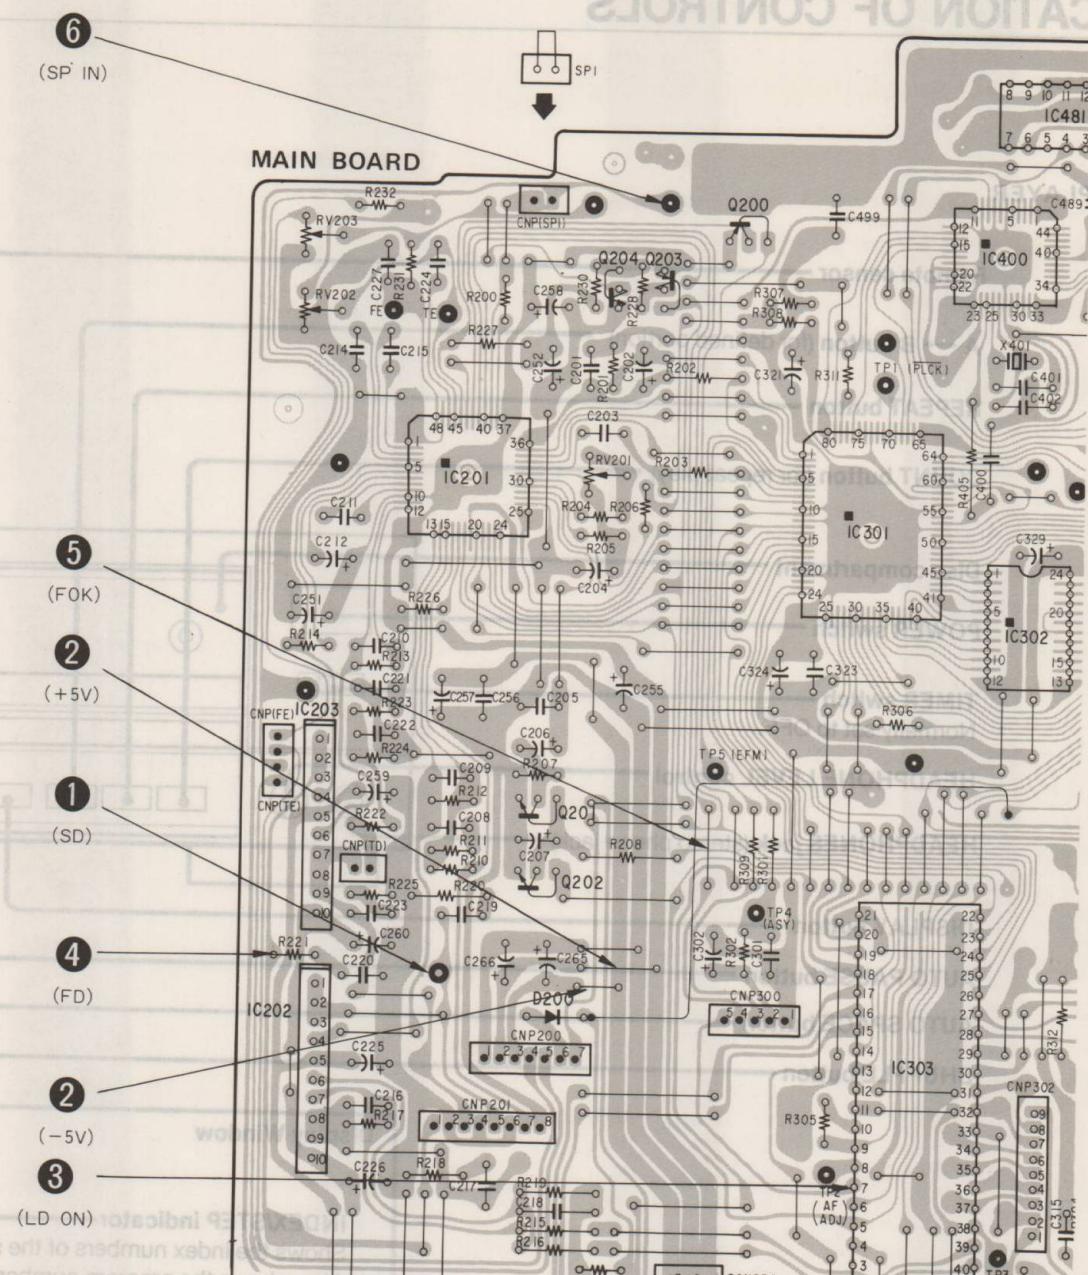

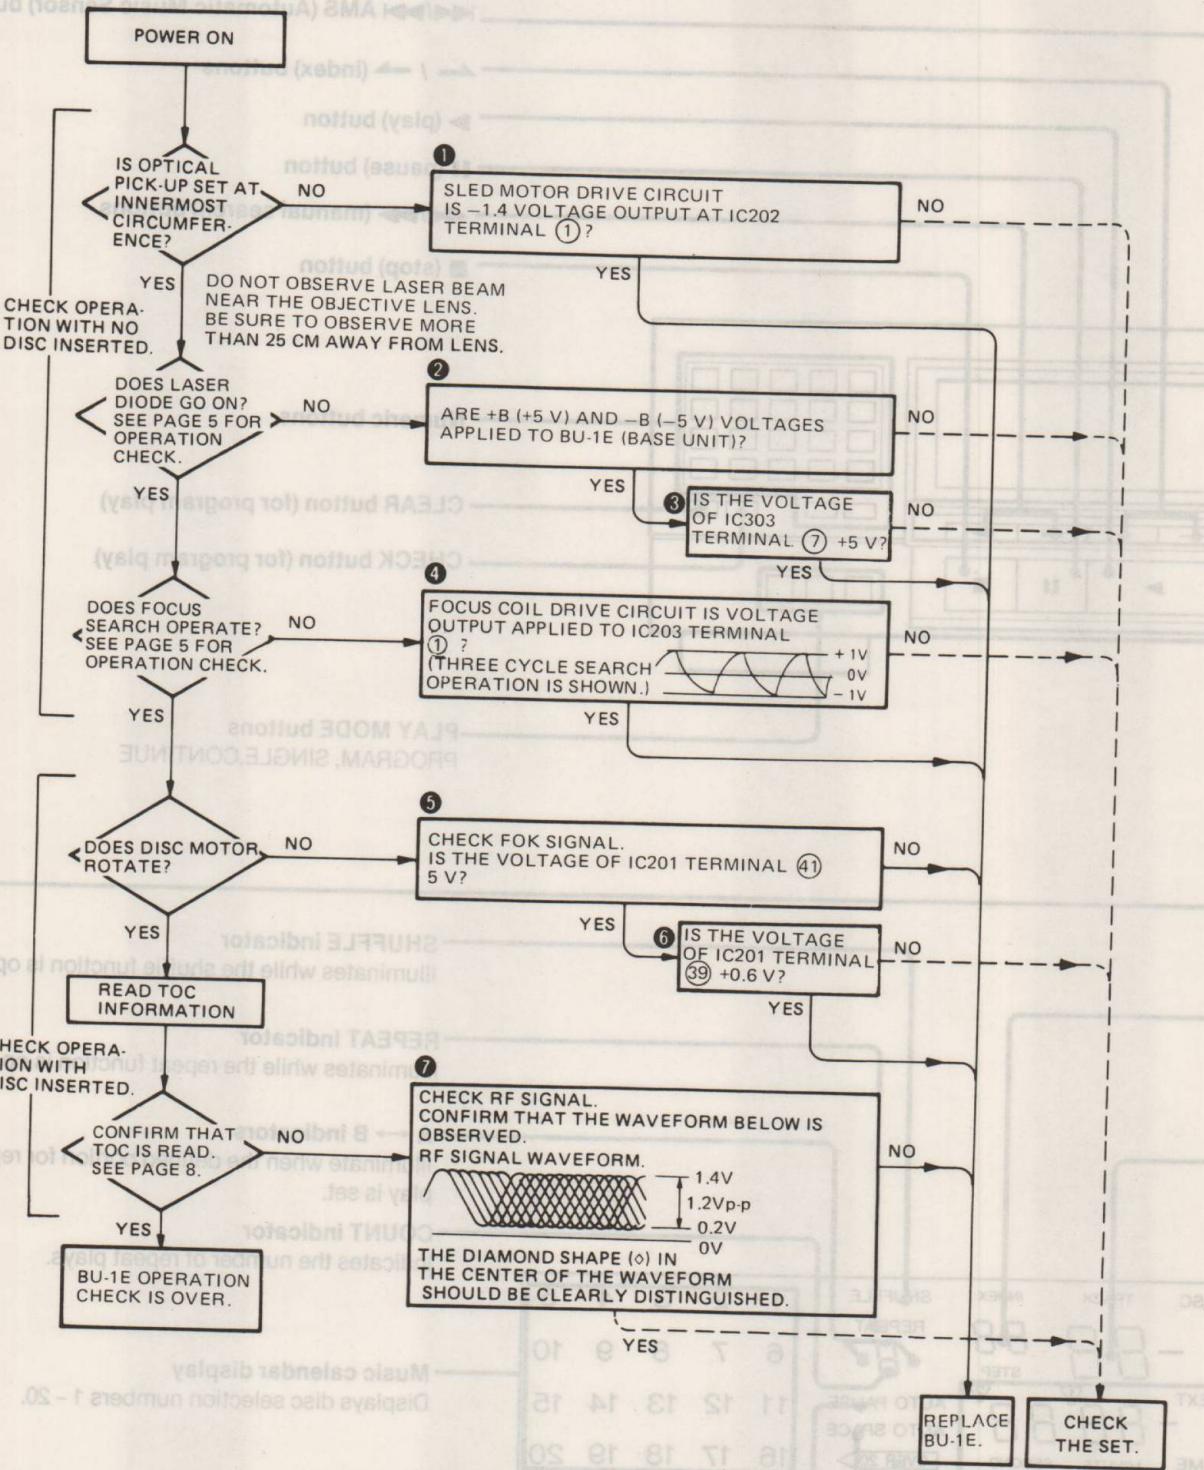

Be sure to lay on the table a conductive sheet (with impedance lower than  $10^9 \Omega$ ) such as sheet of copper which is grounded.

3. As static electricity built-up on clothes is not drained away, be careful not to let your clothes touch the BU-1C.

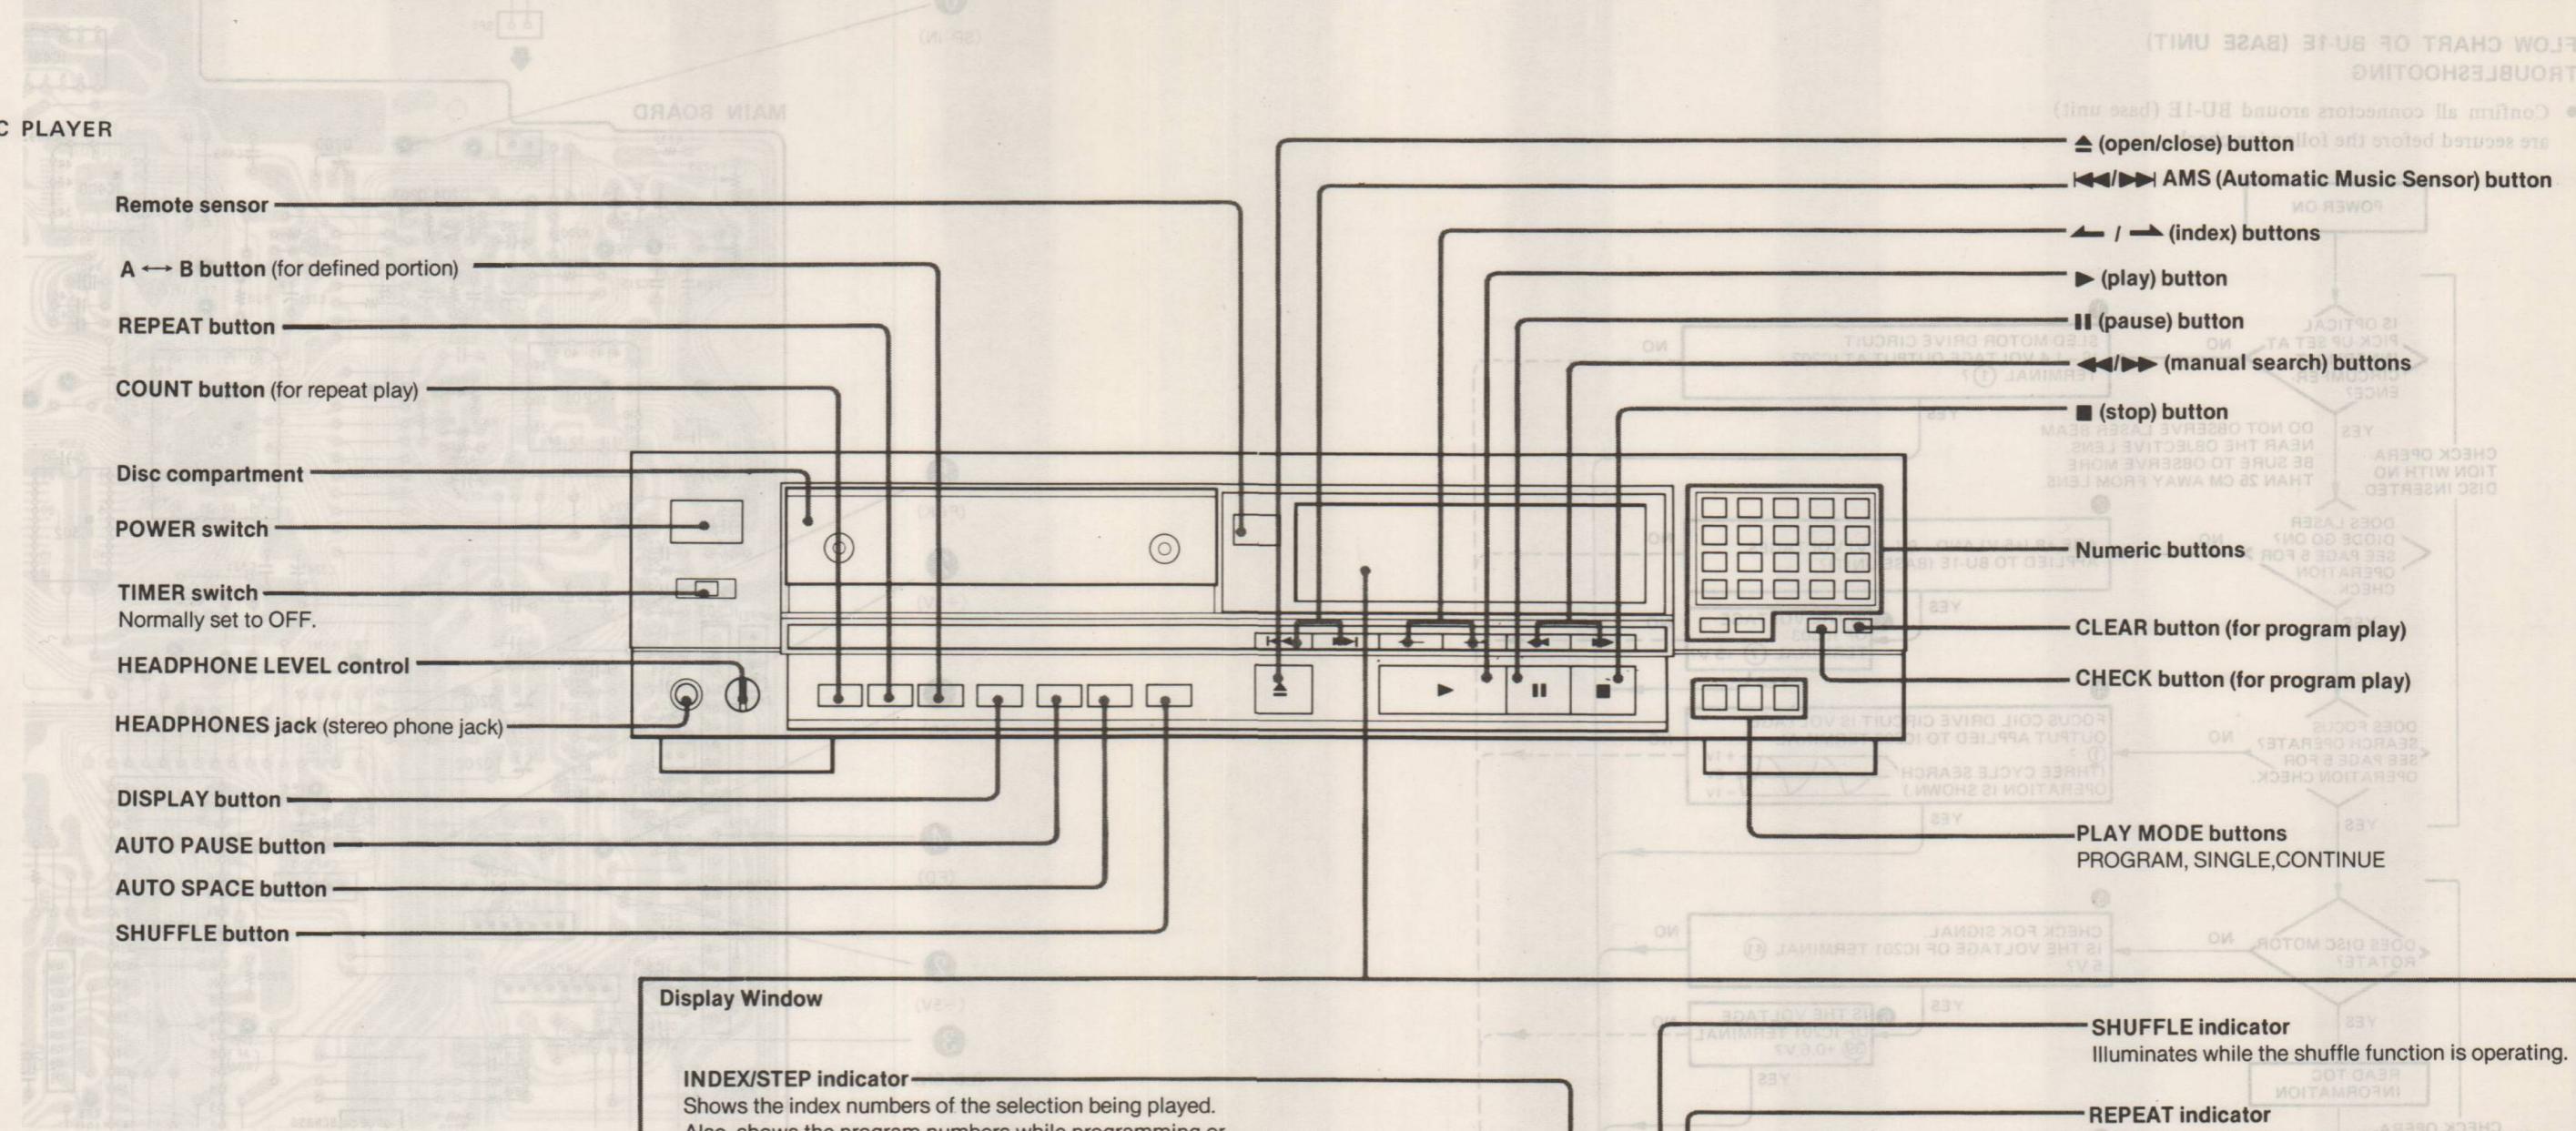

**FLOW CHART OF BU-1E (BASE UNIT)  
TROUBLESHOOTING**

- Confirm all connectors around BU-1E (base unit) are secured before the following check.

## LOCATION OF CONTROLS

### Display Window

#### INDEX/STEP indicator

Shows the index numbers of the selection being played. Also, shows the program numbers while programming or checking program.

#### TRACK indicator

Shows the track number of the selection being played. When the disc compartment is closed with a disc in place, this indicator shows for a few seconds the total number of selections on the disc.

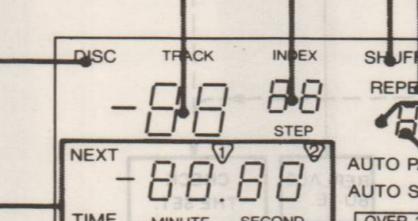

#### Disc indicator

Illuminates when the disc compartment is closed with a disc in place or when the disc compartment is opened.

#### TIME/NEXT indicator

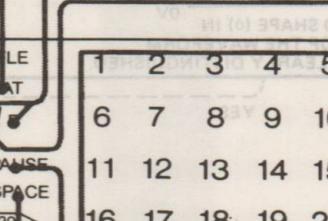

Shows the elapsed time of the selection being played. When the disc compartment is closed with a disc in place, this indicator shows for a few seconds the total playing time of the disc.

While playing programmed selections, this shows the two preceding programmed selections.

#### OVER 20 display

Illuminates when a disc having more than 20 selections is placed in the disc compartment.

#### SHUFFLE indicator

Illuminates while the shuffle function is operating.

#### REPEAT indicator

Illuminates while the repeat function is operating.

#### A ↔ B indicators

Illuminate when the defined portion for repeat play is set.

#### COUNT indicator

Indicates the number of repeat plays.

#### Music calendar display

Displays disc selection numbers 1 - 20.

#### AUTO PAUSE indicator

Illuminates while the auto pause function is operating.

#### AUTO SPACE indicator

Illuminates while the auto space function is operating.

**REAR PANEL**

YAJI MARDIYA

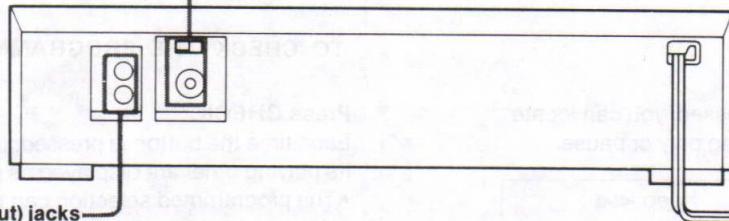

КОМПЕРНЮС

**DIGITAL OUT jack and switch**When the switch is set to **ON**

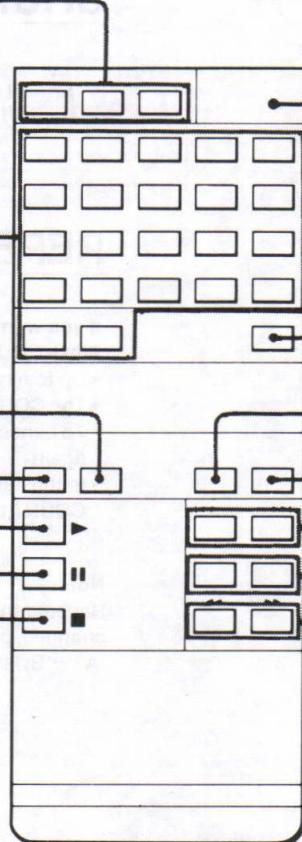

Digital signal is output through the DIGITAL OUT jack.

When the switch is set to **OFF**

Be sure to set to OFF when you listen to the music through the headphones or the LINE OUT jacks.

**LINE OUT (audio output) jacks**

Output audio signal.

**REMOTE COMMANDER****PLAY MODE buttons**PGM (program), SINGLE,

## SEARCH OPERATION

To play from a selection number which is greater than 20, use the **[+10]** and **[0]** to **[9]** buttons.

### Examples

To play from the 22nd selection

1 Press **[+10]** two times.

2 Press **[2]**.

To play from the 30th selection

1 Press **[+10]** three times.

2 Press **[0]**.

Keeping the **◀◀** or **▶▶** buttons pressed, you can locate a particular point of a selection during play or pause.

|                                    |                         |
|------------------------------------|-------------------------|
| <b>To go back at a high speed</b>  | Keep <b>◀◀</b> pressed. |
| <b>To go ahead at a high speed</b> | Keep <b>▶▶</b> pressed. |

Release the button at the desired point found by monitoring the high-speed sound.

### In pause mode

- The search speed is increased by three times.
- As no sound comes out, observe the time counter to search for the desired point.

Keeping **◀◀** or **▶▶** pressed, following indication appears.

**—** : At the disc end

**— —** : At the very beginning of the disc

## PROGRAM PLAY

### What is this indication? " - - - - "

If a selection numbered 21 or higher is programmed or total playing time of the programmed selection exceeds 99 min. 59 sec., " - - - - " indications appear on the display window instead of the numbers.

### If the PROGRAM button is pressed during playing

The selection being played is programmed if the PROGRAM button is pressed during disc play, shuffle play or single play.

## TO CHECK THE PROGRAMMED SELECTIONS

### Press CHECK.

Each time the button is pressed, the selection number and its playing order are displayed as programmed.

- The programmed selection can be checked during playing.
- When selections after the 20th are being checked, the track number and program order number are displayed, but there is no display in the music calendar.
- End is displayed when the last programmed selection plays.

## SHUFFLE PLAY

### What is this indication?

This indication appears while the player is "shuffling" the selection.

## REPEAT PLAY

### If you want to repeat play more than two times

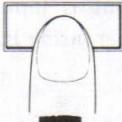

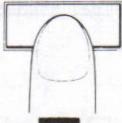

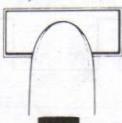

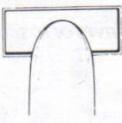

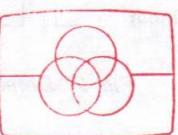

Press COUNT the number of times you want the play to repeat.

- Up to nine repeat plays are possible.
- The COUNT button can be pressed in any playing mode.
- To cancel the number of times for repeat play, press REPEAT again.
- In the case of the play between the defined portion (A ↔ B), the COUNT button is inoperative.

### Note

Repeat function is effective even when the playing mode is changed, provided that the repeat play between the defined portion (A ↔ B) is released.

## **INFORMATION DISPLAY**

## SECTION 1 OUTLINE

### 1-1. CIRCUIT DESCRIPTION

#### S SERVO (Defect Prediction Servo)

There was a detection circuit on former models (refer to CDP-103, CDP-303ES Service Manual circuit description) for detecting signal dropout caused by such defects as dirt on the disc or bubbles and scratches caused during production of the disc. However, that method had the disadvantage of a time lag between generation of the dropout and switching of servo loop gain, and sometimes detection could not be done.

With the S servo (defect prediction servo) used on this set, when a defect on the disc occurs in the same cycle as the rotation cycle, the system recognizes the cycle and detects the error. It predicts the timing at which the error will next be generated and controls the servo amount of the focus and tracking servo circuits. This means that servo gain switching is enabled immediately before the dropout occurs, and stable tracing relative to disc defects is possible.

It also has the same time precision at both the inner and outer circumferences because it responds to CLV by time data from the mechanism control IC.

Fig. 1 shows an outline of the S servo system.

Refer to Figures 2 and 3 for the following explanation of operation. When there is a defect on the disc, the RF signal is cut (A), envelope detection is done inside IC101 (the same as the conventional method) and output is from pin (21).

That output signal (DFCT) is input to defect control IC IC304 pin (30) (B). The time data from mechanism control IC IC303 and DFCT input are compared inside IC304, the time of the next error is predicted, and just before dropout occurs, a signal is output from pin (29) (C). The timing of this output is set by IC304. The result of taking the OR of this output and IC101 pin (21) output is input to IC201 pin (44) (D) and the sequencer inside IC201 switches servo gain.

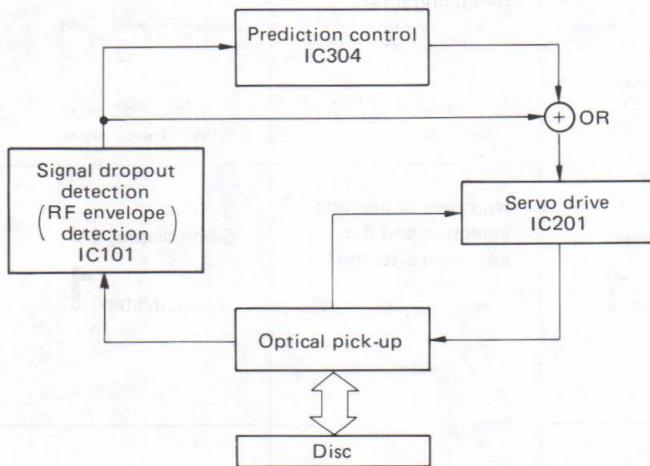

Fig. 1 S Servo Block Diagram

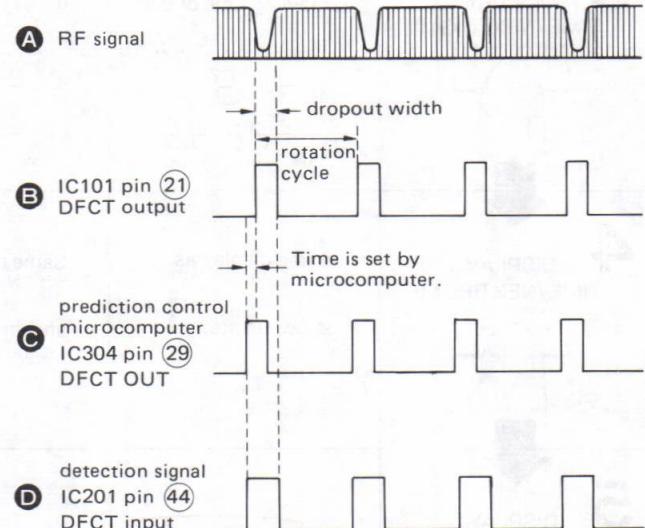

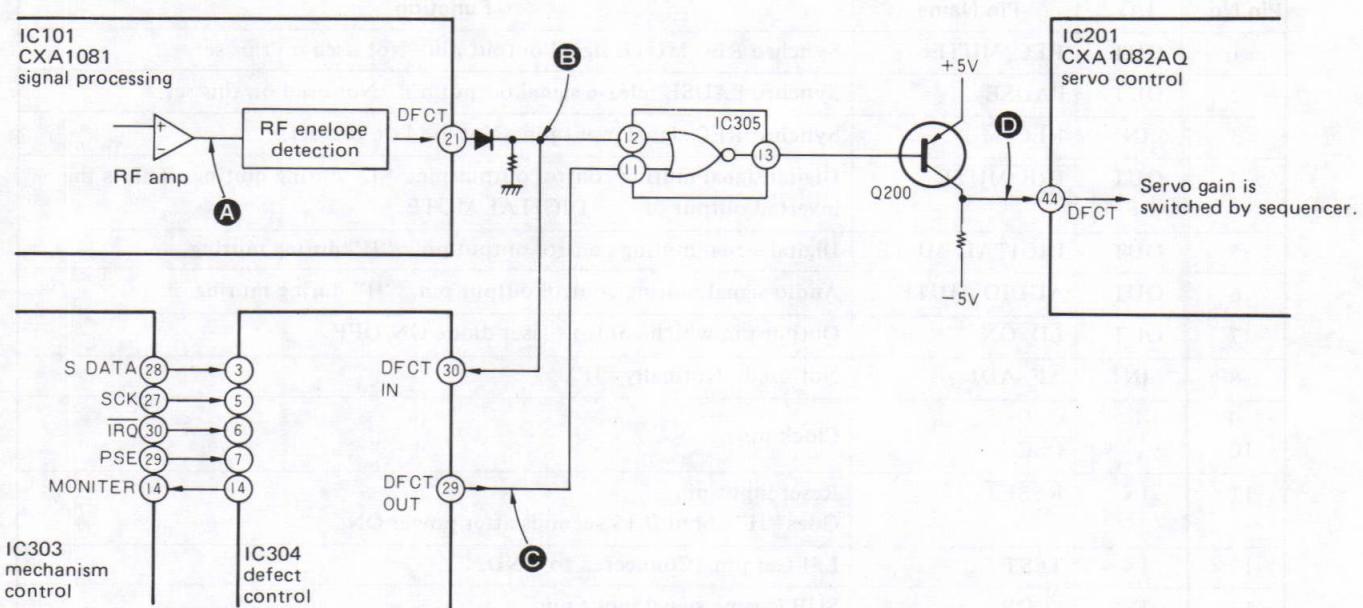

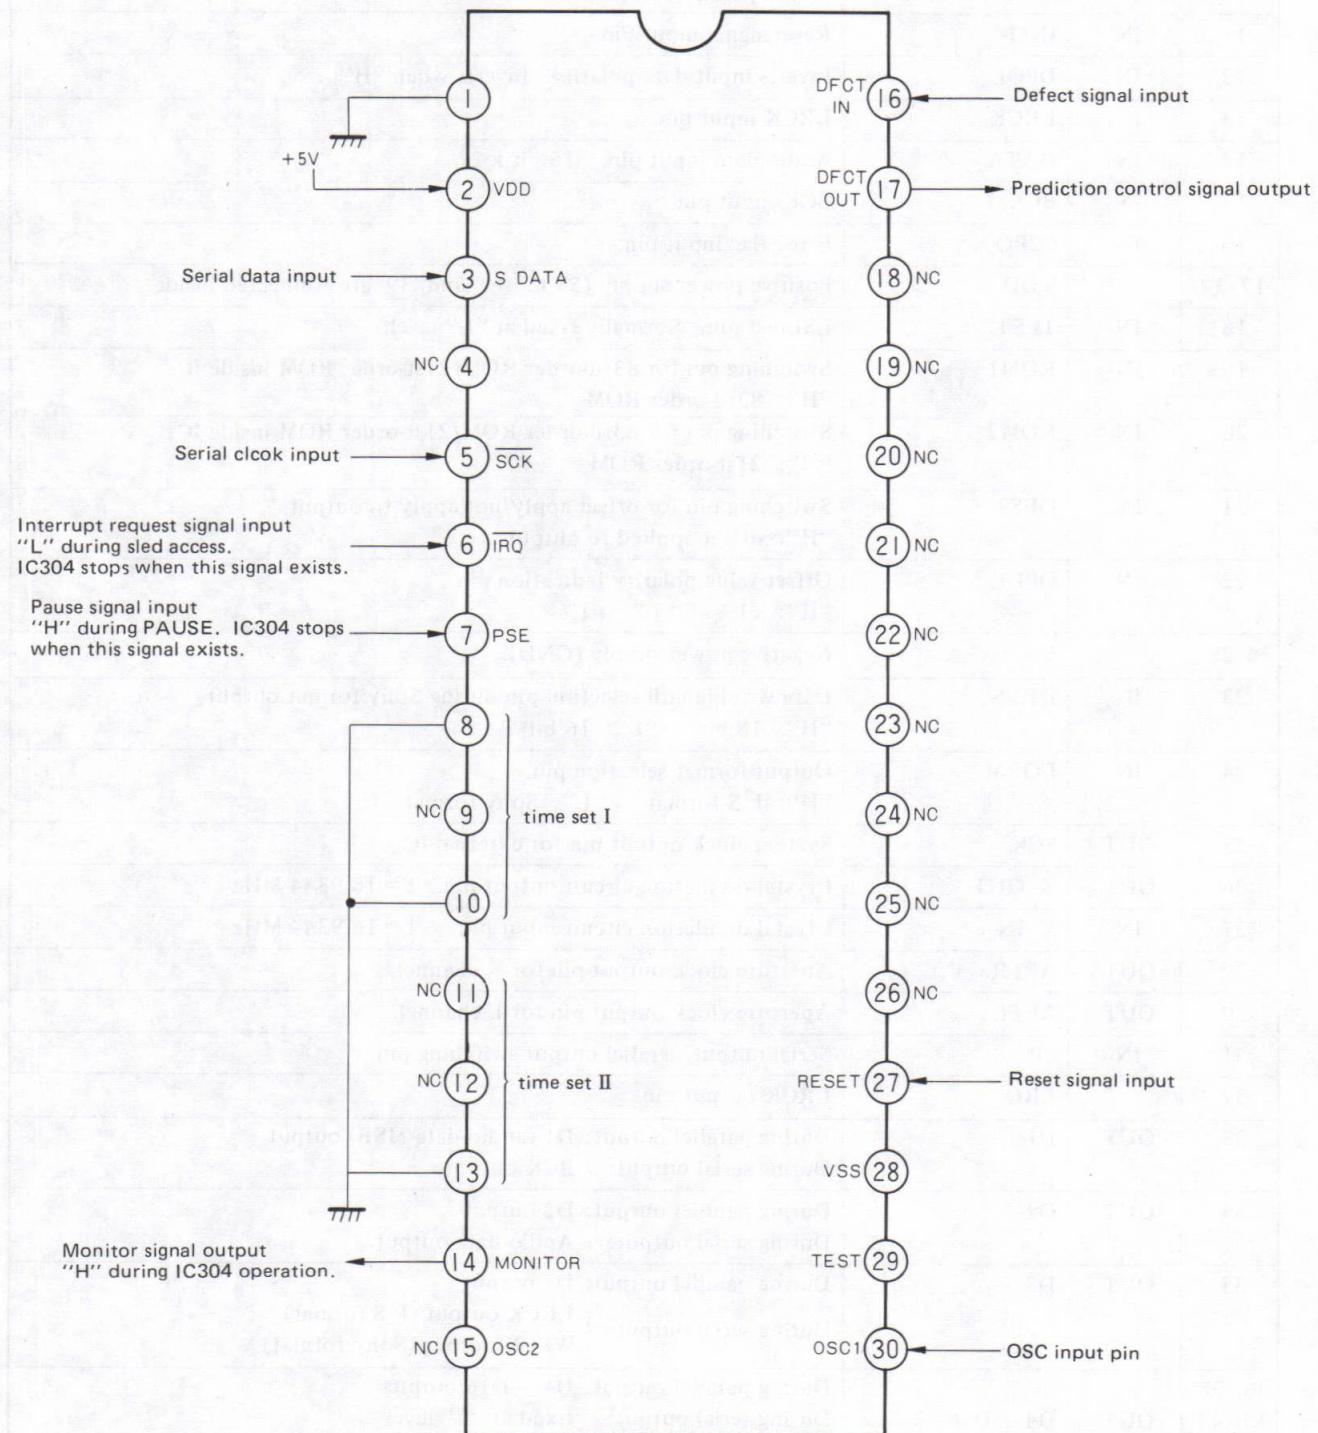

Fig. 2 Defect Detection Waveforms

**Fig. 3 Defect Detection Circuit**

## IC303 (MSM6404-181RS) PIN FUNCTIONS

| Pin No. | I/O    | Pin Name      | Function   |
|---------|--------|---------------|--|
| 1       | OUT    | REC MUTE      | Synchro REC MUTE signal output pin. Not used on this set.  |
| 2       | OUT    | PAUSE         | Synchro PAUSE release signal output pin. Not used on this set.   |
| 3       | IN     | REC M         | Synchro REC signal input pin. Not used on this set.  |
| 4       | OUT    | D/F MUTE      | Digital signal muting control output pin. "L" during muting. This is the inverted output of (5) DIGITAL MUTE.  |
| 5       | OUT    | DIGITAL MUTE  | Digital signal muting control output pin. "H" during muting.   |
| 6       | OUT    | AUDIO MUTE    | Audio signal muting control output pin. "H" during muting.   |
| 7       | OUT    | LD ON         | Output pin which controls laser diode ON/OFF.  |
| 8       | IN     | AF ADJ        | Not used. Normally "H".  |
| 9       | —      | OSC           | Clock pins.  |
| 10      | —      | OSC           |  |
| 11      | IN     | RESET         | Reset input pin.<br>Goes "H" about 0.15 seconds after power ON.  |
| 12      | IN     | TEST          | LSI test pin. Connected to GND.  |
| 13      | IN     | SCOR          | SUB Q sync signal input pin.   |
| 14      | IN     | MONITOR       | Input pin for monitor signal from IC304. "H" during IC304 operation.   |
| 15      | IN     | IN SW         | Input pin which detects that disc table is closed. "L" during CLOSE.   |
| 16      | IN     | OUT SW        | Input pin which detects that disc table is open. "L" during OPEN.  |
| 17      | IN     | F OK          | Focus OK signal input pin.   |
| 18      | IN     | SQCK          | WFCK (Write Frame Clock) input pin.  |
| 19      | IN     | GFS           | Guard Frame Sync input pin. "H" is input when data can be read normally.   |
| 20      | IN     | SUB Q         | SUB Q signal (has data such as address, emphasis, etc.) input pin.   |
| 21      | —      | GND           | Ground pin.  |
| 22      | IN     | SENSE         | Input pin for IC201, IC301 SENS output.  |
| 23      | OUT    | CLOCK         | Clock output pin for serial data transmission to IC201, IC301.   |
| 24      | OUT    | LATCH         | Latch output pin for serial data transmission to IC201, IC301.   |
| 25      | OUT    | DIRC          | Output pin to IC201 during 1 track jump. Normally "H".<br>Inverts direction of track jump when "L". Set to normal tracking mode by "H". Output "L" for a certain time when TZC rise or fall is detected.   |
| 26      | OUT    | DATA          | Output pin for serial data to IC201, IC301.  |
| 27      | OUT    | S CK          | Clock output pin for serial data transmission to IC304.  |
| 28      | OUT    | S DATA        | Serial data output pin to IC304.   |
| 29      | OUT    | PSE           | Pause signal output pin to IC304. "H" during PAUSE.  |
| 30      | OUT    | IRQ           | Interrupt request signal output pin to IC304. "L" during sled access.  |
| 31      | —      | R/W           | DATA input and output states (read and write) control (sync) signal.   |
| 32      | OUT    | S ACK         | Output pin for acknowledge signal of IC700 M REQ signal.   |
| 33      | IN     | M REQ         | IC700 M REQ signal input pin.  |
| 34-37   | IN/OUT | CMD 0 – CMD 3 | Data input/output pins with IC700.   |
| 38      | IN     | ADJUST        | When this pin is made "L", IC303 does not load out the disc even if servo or other abnormalities are detected. This pin is used during servo, PLL and other adjustment.<br>Direct search is also not done, and access can only be done by track jumping. |

| Pin No. | I/O | Pin Name | Function   |
|---------|-----|----------|--|
| 39      | OUT | LOAD IN  | Output pin which drives the loading motor to the close side.         |
| 40      | OUT | LOAD OUT | Output pin which drives the loading motor to the open side.          |
| 41      | OUT | EPS      | Output pin which detects disc emphasis and switches emphasis ON/OFF. |
| 42      | -   | Vcc      | Power supply pin (5V).   |

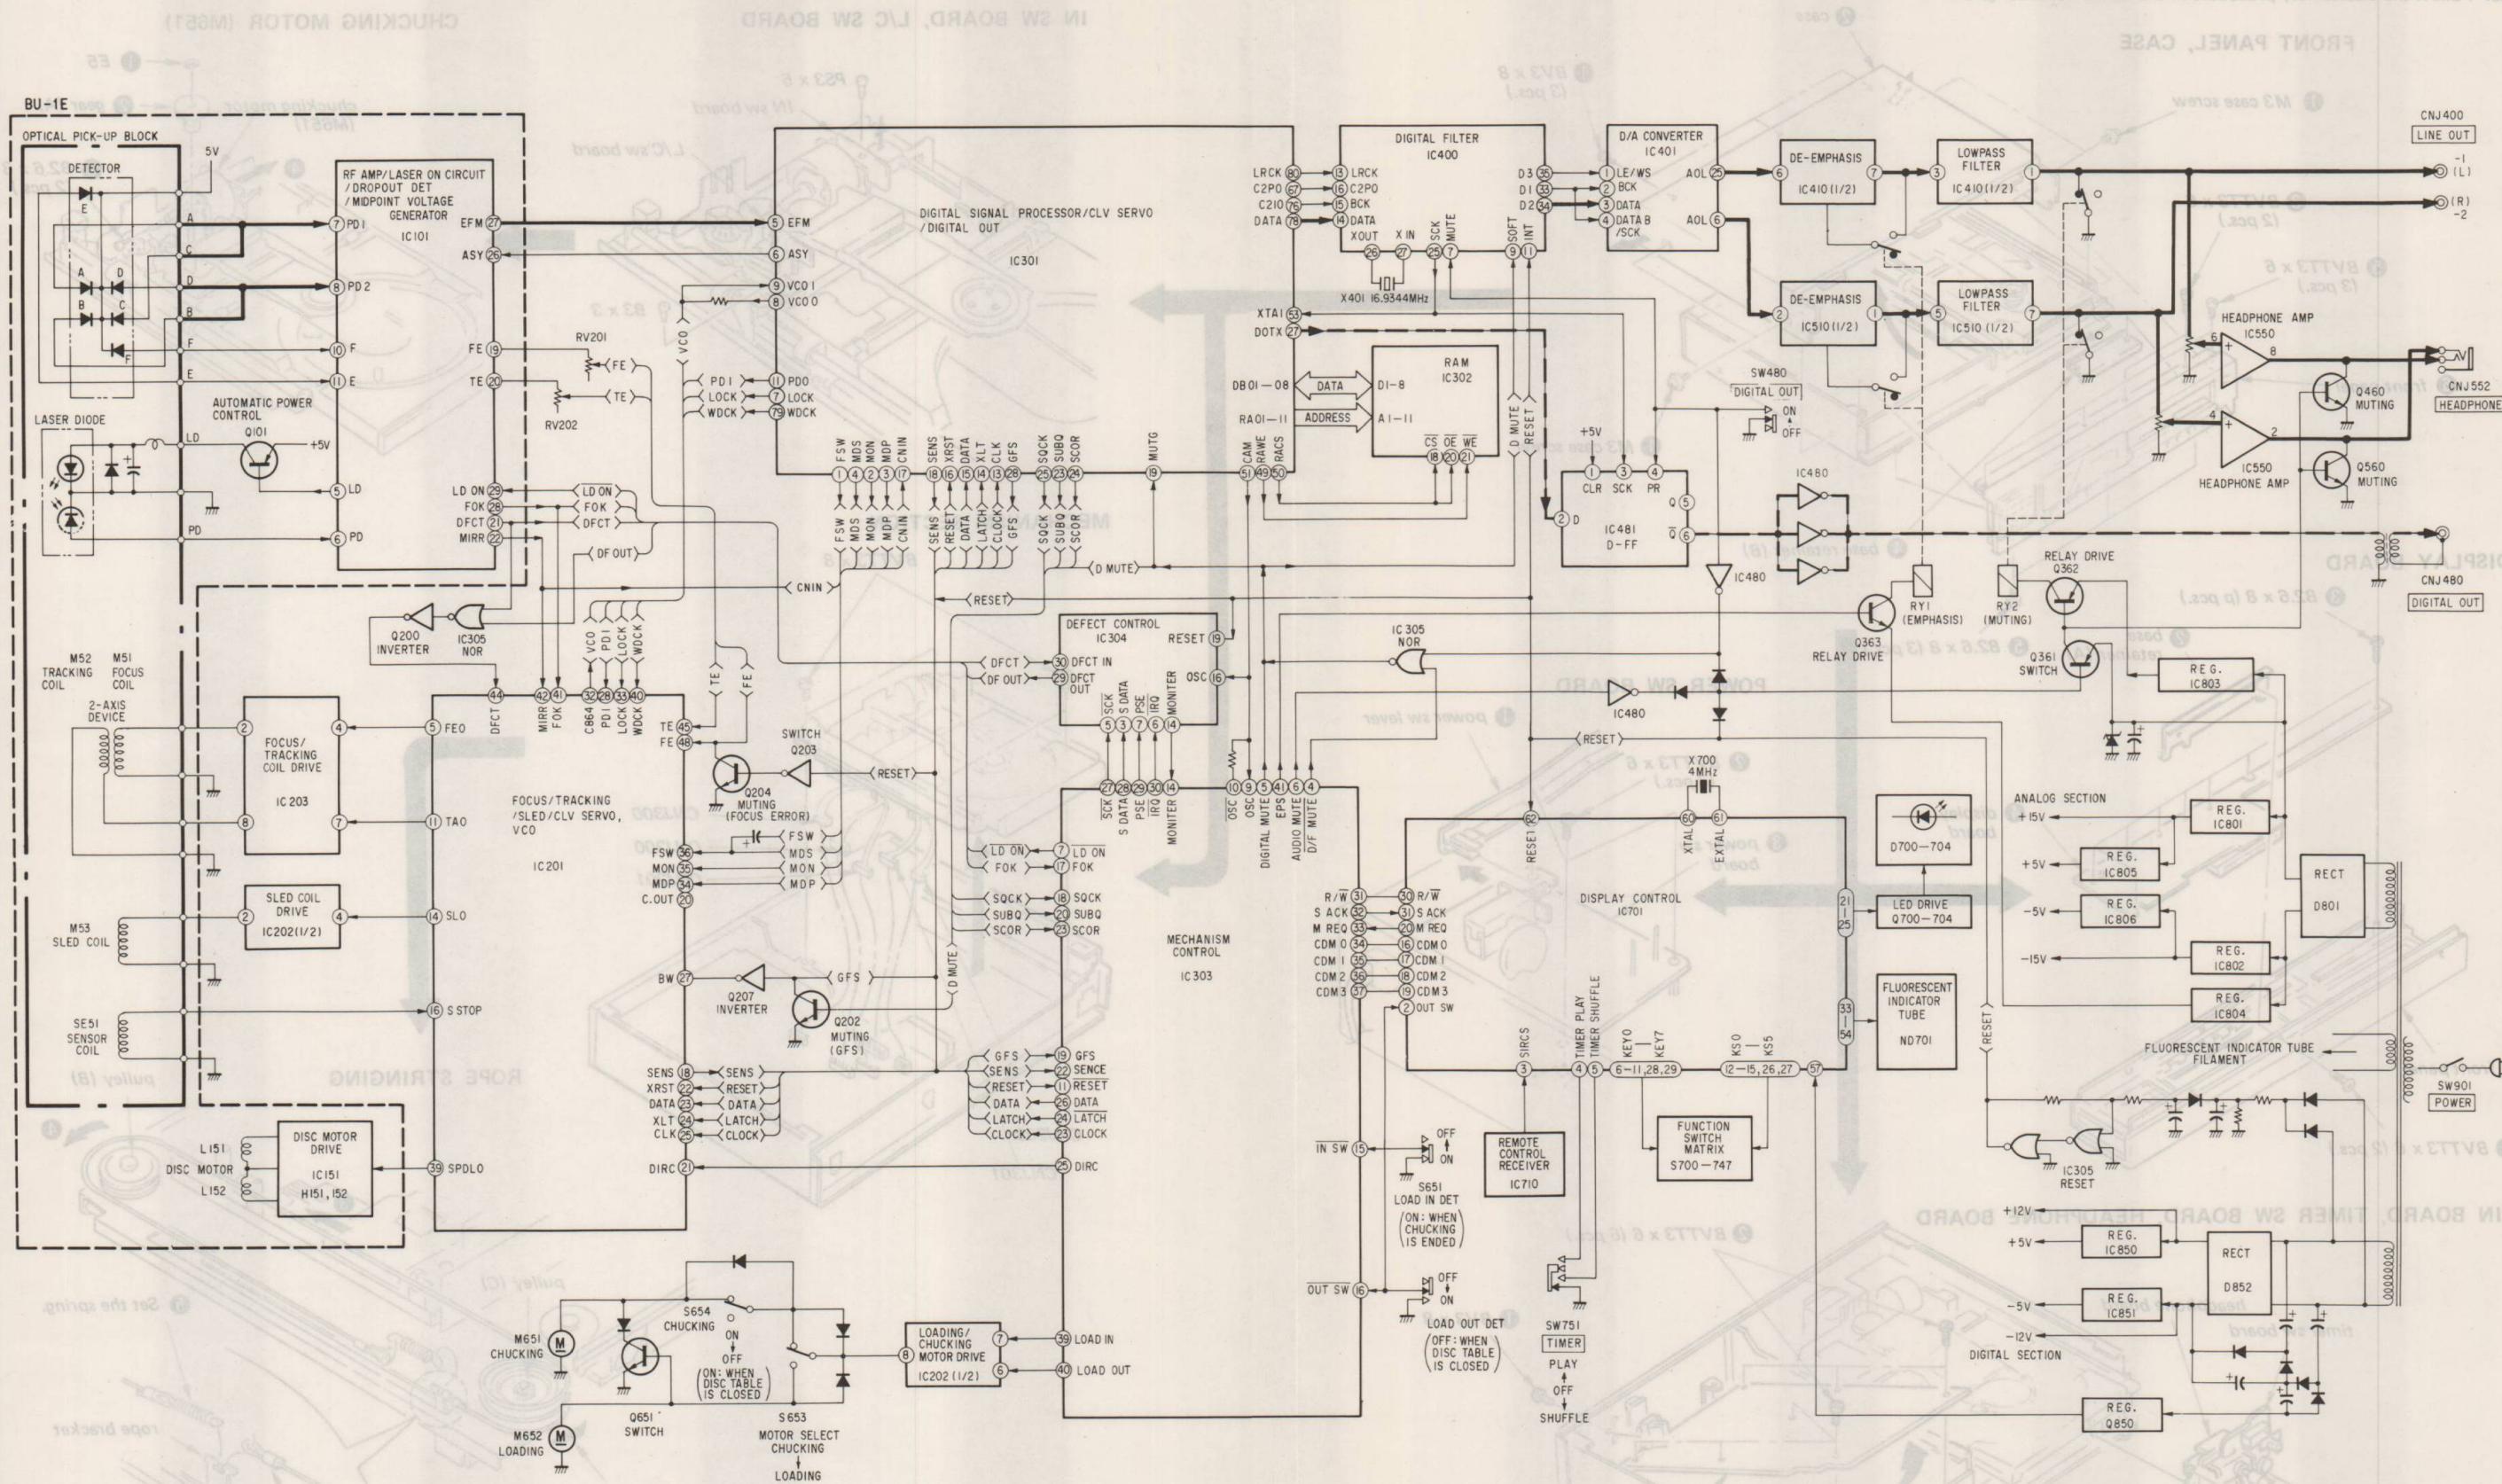

**IC304 (LC6523-3270H) PIN FUNCTIONS**

## IC400 (CXD1088Q) PIN FUNCTIONS

| Pin No.               | I/O | Pin Name | Function  |
|-----------------------|-----|----------|---|
| 7                     | IN  | MUTE     | Muting signal input pin. Output is muted when "H".  |
| 8                     | IN  | TEST1    | LSI test pin. Normally fixed at "L" level.  |
| 9                     | IN  | SOFT     | Soft muting signal input pin.<br>Soft muting when "H".<br>Soft muting: Gradual muting, as for fade-out.                         |
| 10                    | IN  | HOLD     | Mute operation ON/OFF switching pin.<br>Mute operation stops when "H".  |
| 11                    | IN  | INIT     | Reset signal input pin.   |
| 12                    | IN  | DPOL     | Inverts input data polarity. Inverts when "H".  |
| 13                    | IN  | LRCK     | LRCK input pin.   |
| 14                    | IN  | DATA     | Audio data input pin. 16 bit × 2  |
| 15                    | IN  | BCK      | BCK input pin.  |
| 16                    | IN  | C2PO     | Error flag input pin.   |
| 17-39                 | -   | VDD      | Positive power supply (5V). (17) and (39) are connected inside.   |
| 18                    | IN  | TEST2    | LSI test pin. Normally fixed at "L" level.  |
| 19                    | IN  | ROM1     | Switching pin for 83rd-order ROM/21st-order ROM inside IC.<br>"H": 83rd-order ROM   |

| 36-38<br>40-44<br>1-5 | OUT | D4 – D16 | During parallel output: D4 – D16 output<br>During serial output: fixed at "L" level   |

## CDP-333ESD/605ESD CDP-333ESD/605ESD

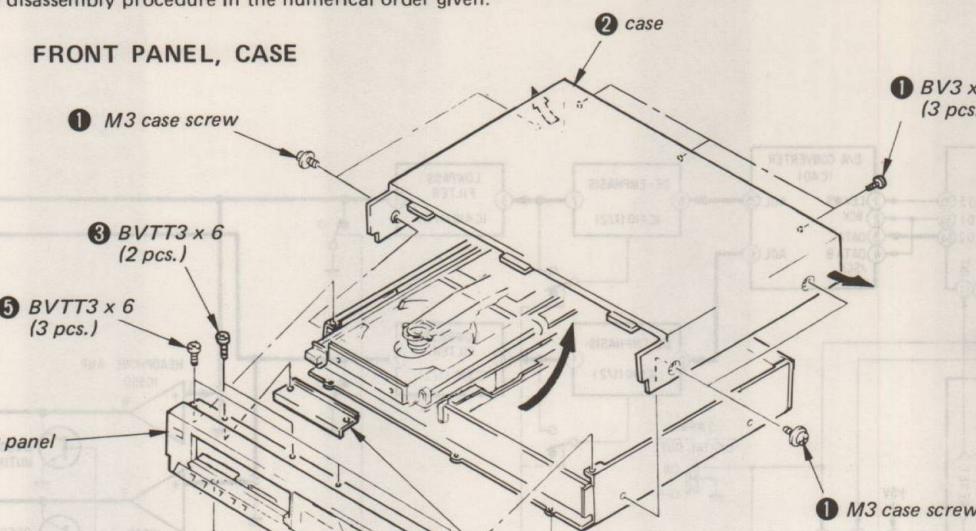

## 1-2. BLOCK DIAGRAM

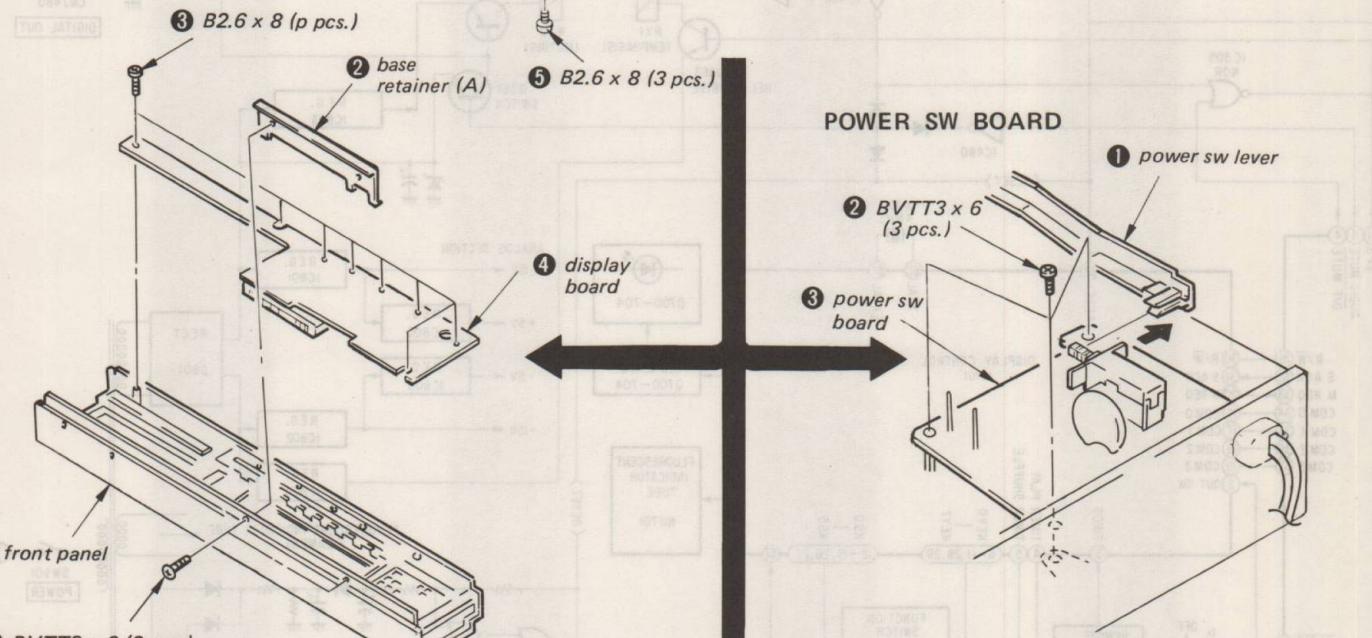

## SECTION 2 DISASSEMBLY

Note: Follow the disassembly procedure in the numerical order given.

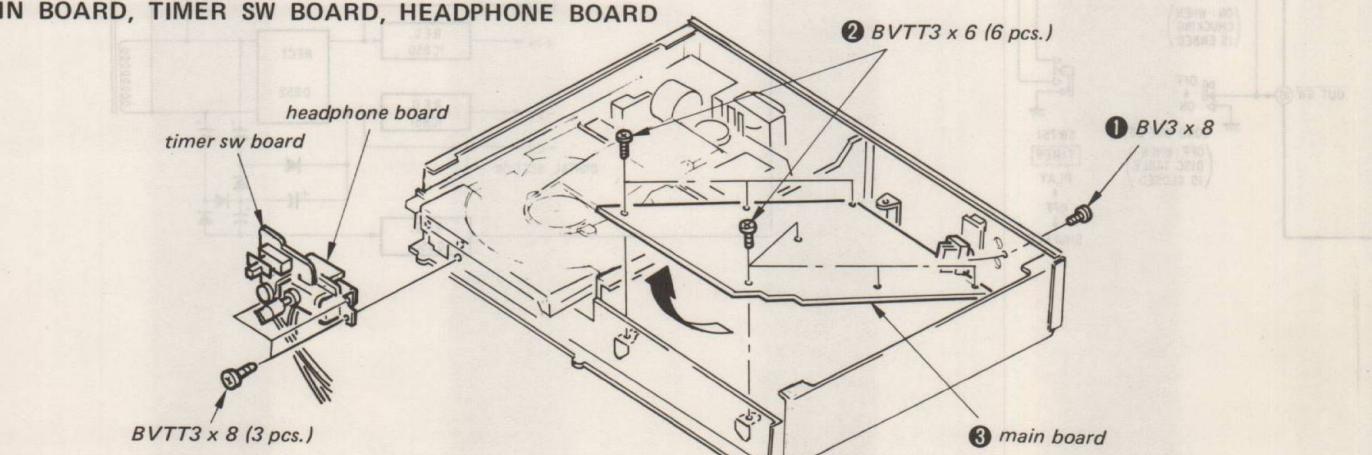

### FRONT PANEL, CASE

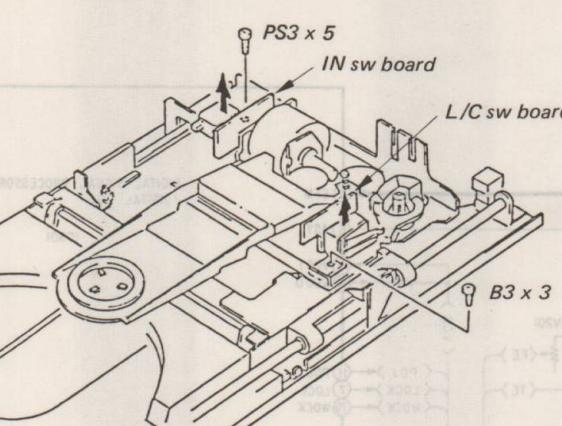

### DISPLAY BOARD

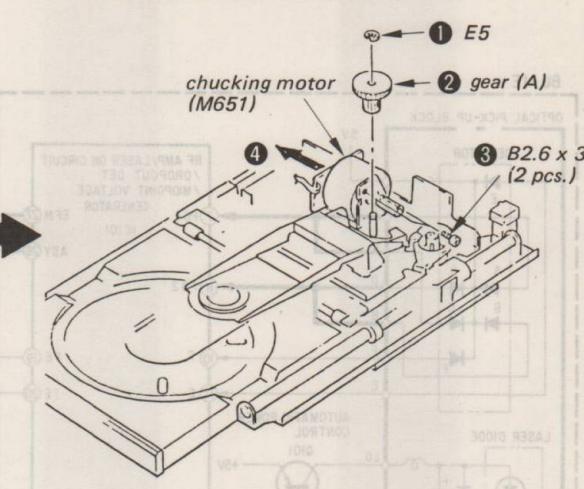

### MAIN BOARD, TIMER SW BOARD, HEADPHONE BOARD

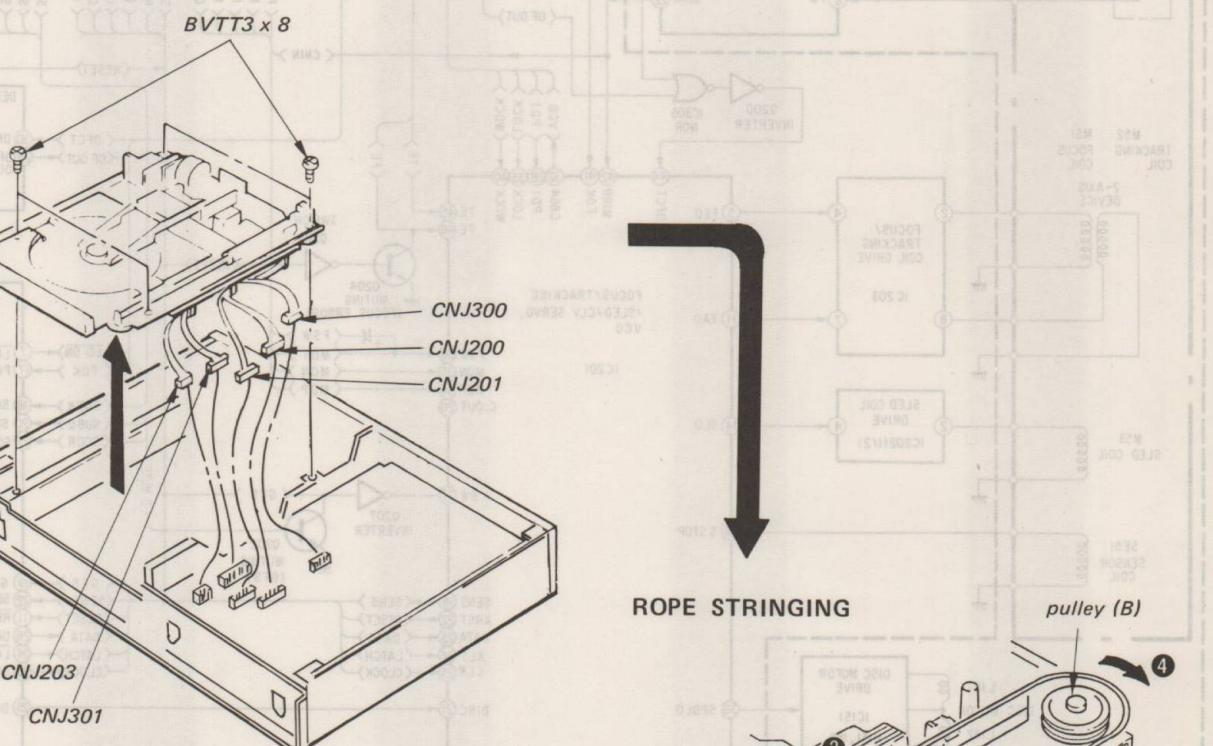

### IN SW BOARD, L/C SW BOARD

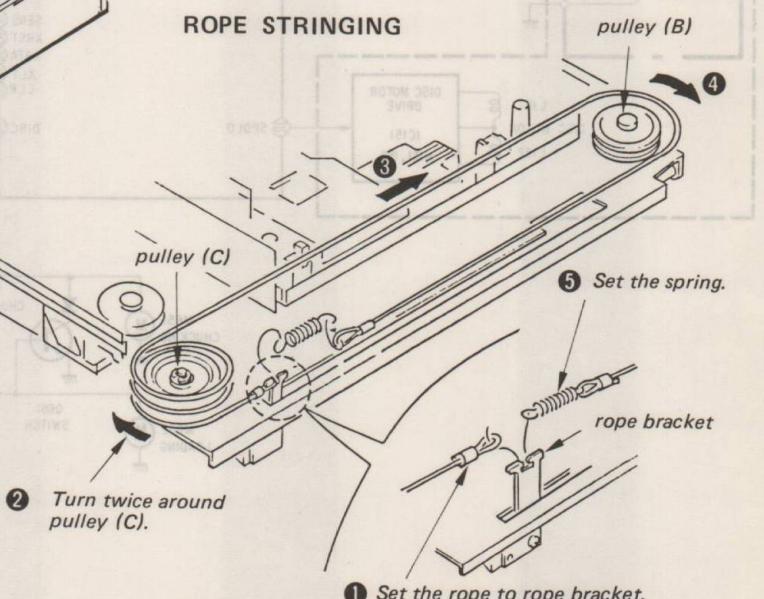

### CHUCKING MOTOR (M651)

### MECHANISM SECTION

### ROPE STRINGING

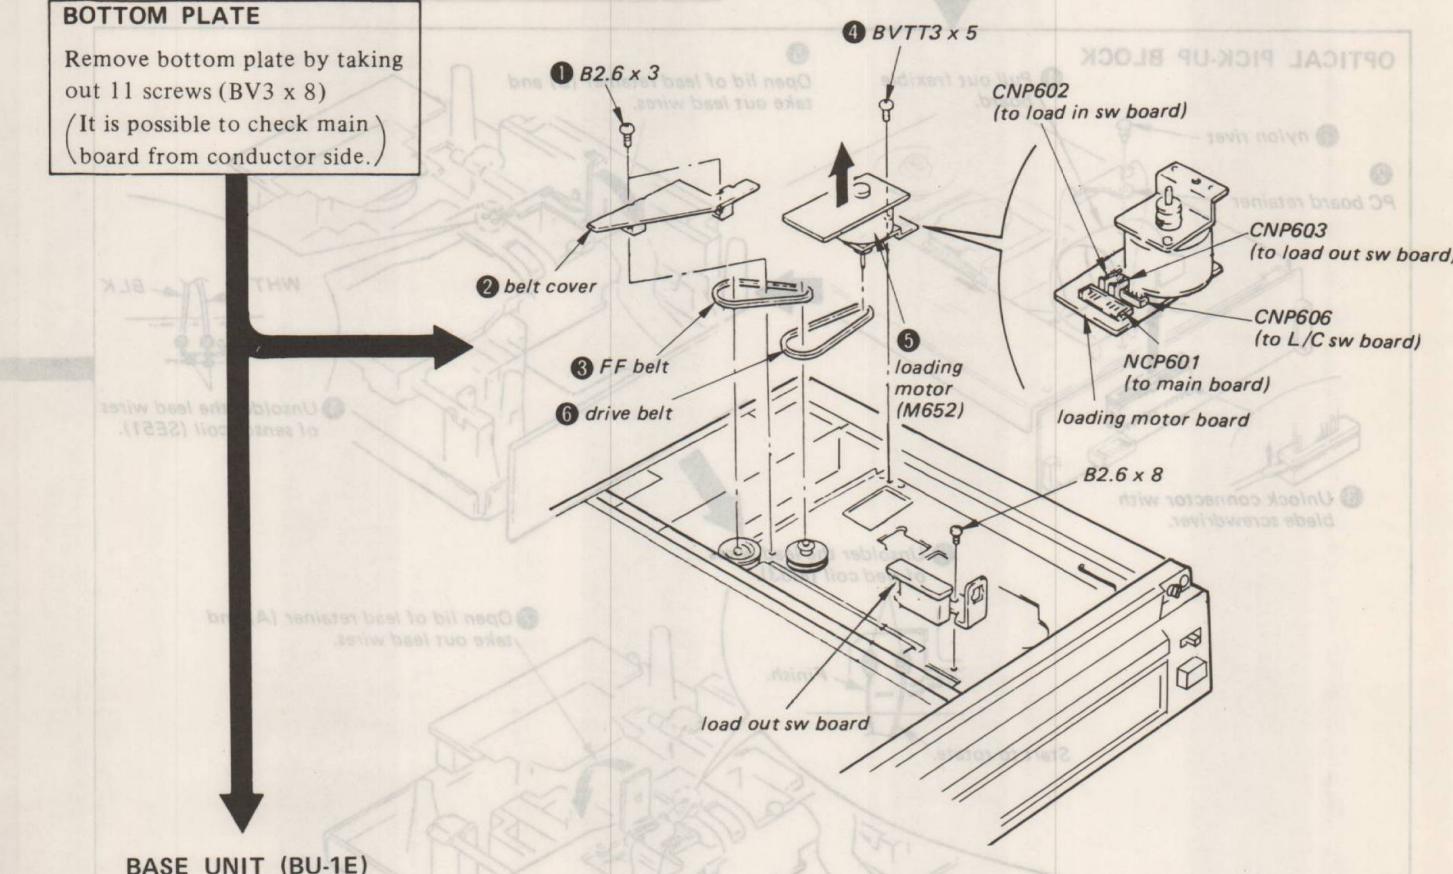

### I-S BLOCK DIAGRAM

Refer to "NOTES ON HANDLING BASE UNIT (BU-1E)" on page 6 to prevent damage caused by static electricity.

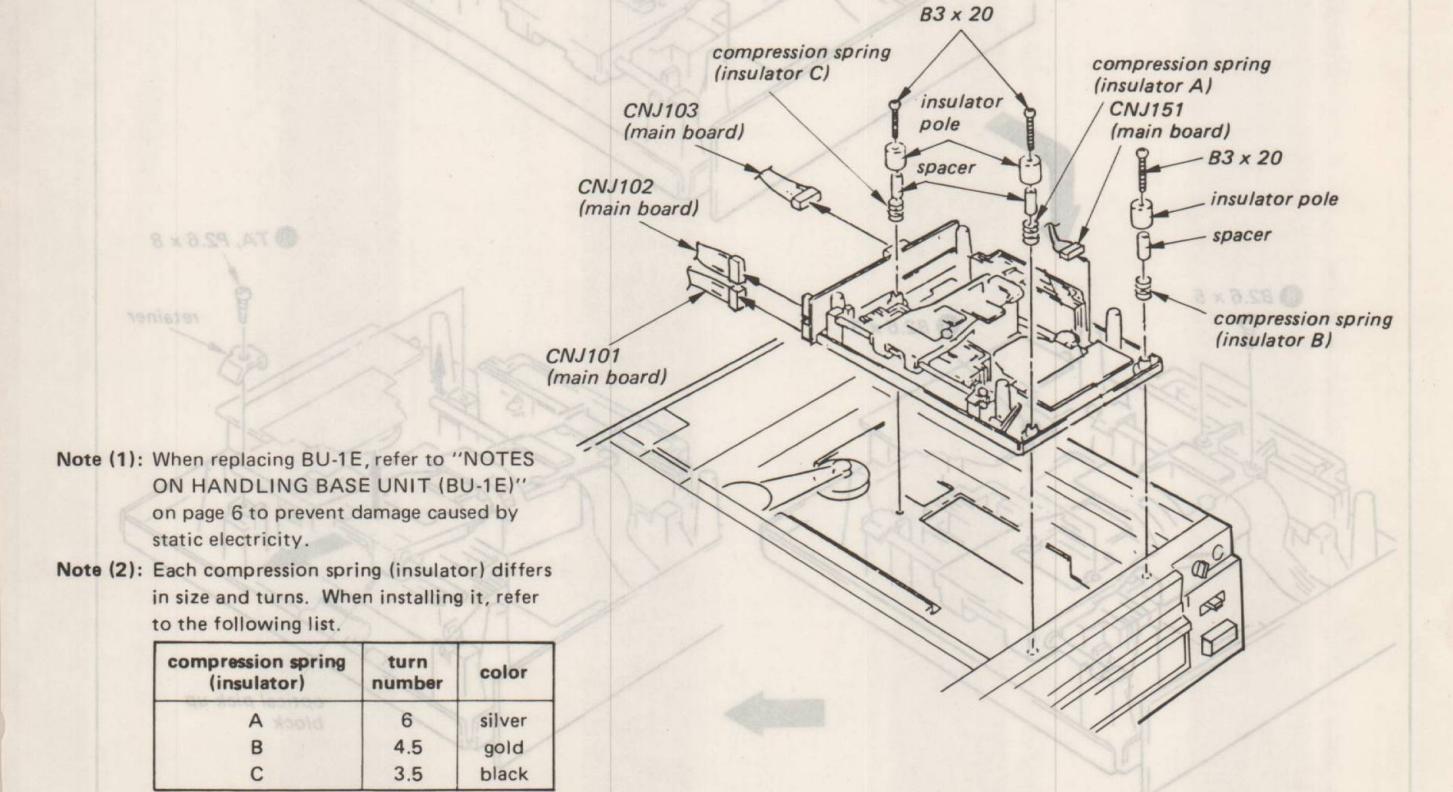

**LOADING MOTOR (M652), FF BELT, DRIVE BELT,  
LOAD OUT SW BOARD**

### BOTTOM PLATE

Remove bottom plate by taking out 11 screws (BV3 x 8)  
(It is possible to check main board from conductor side.)

### BASE UNIT (BU-1E)

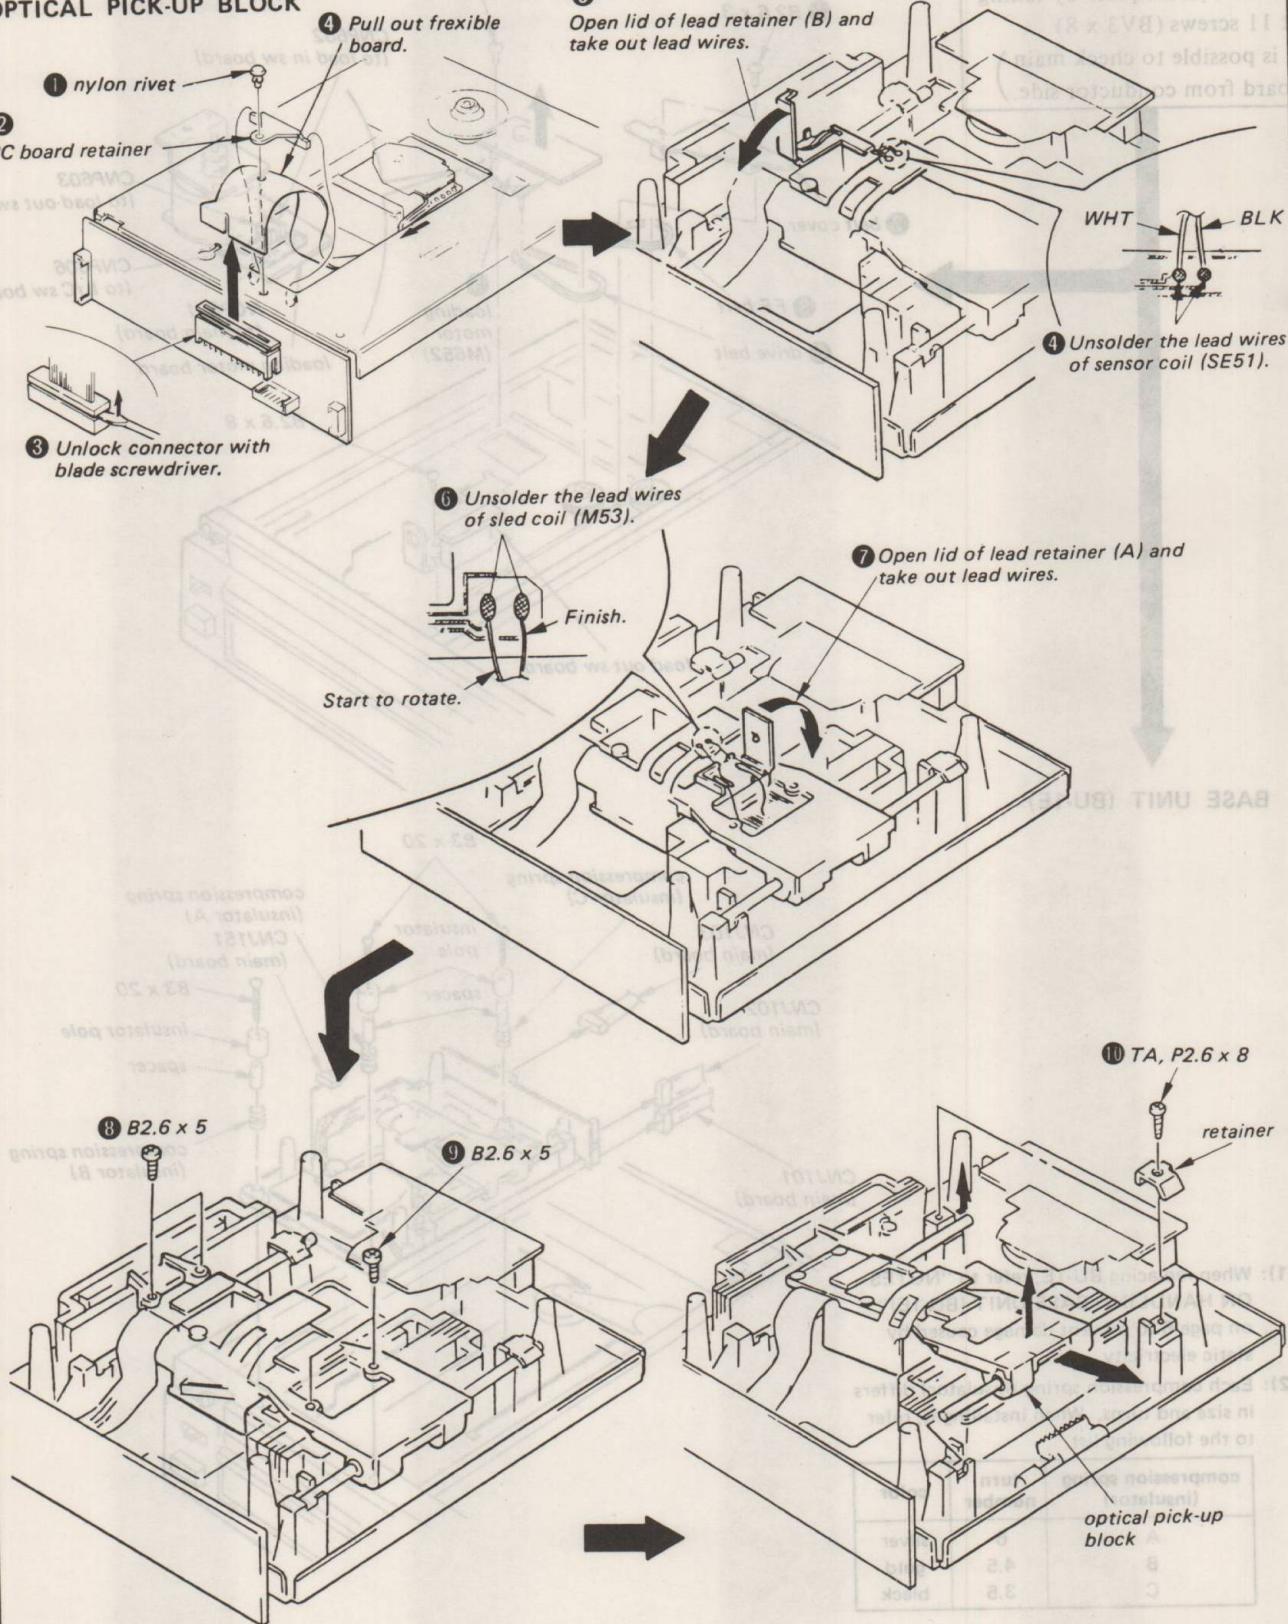

Note (1): When replacing BU-1E, refer to "NOTES ON HANDLING BASE UNIT (BU-1E)" on page 6 to prevent damage caused by static electricity.

Note (2): Each compression spring (insulator) differs in size and turns. When installing it, refer to the following list.

**CDP-333ESD/605ESD****BASE UNIT (BU-1E)**

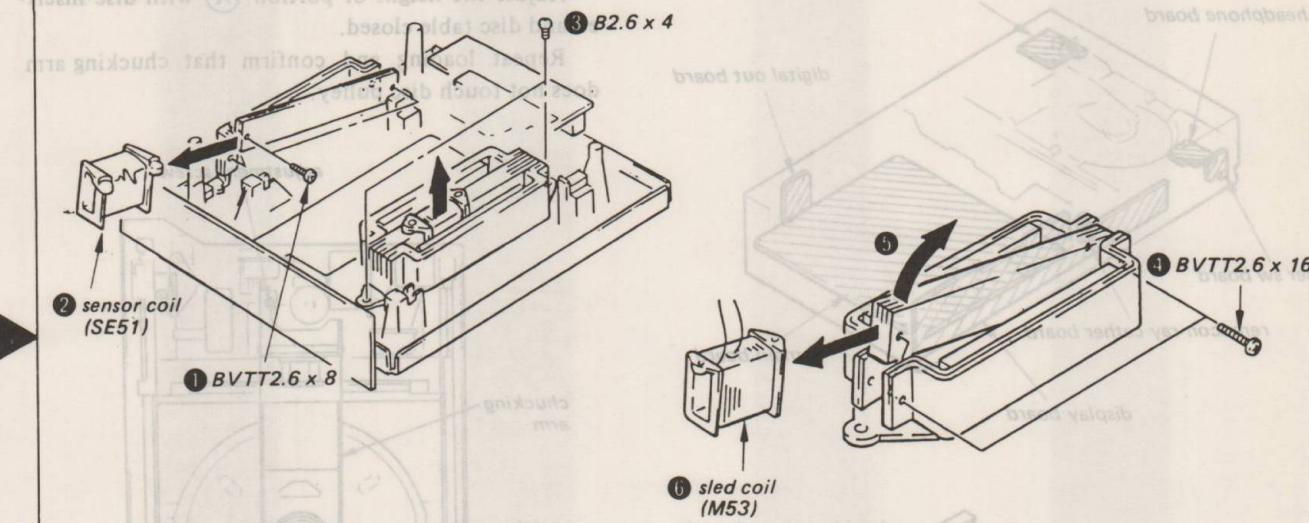

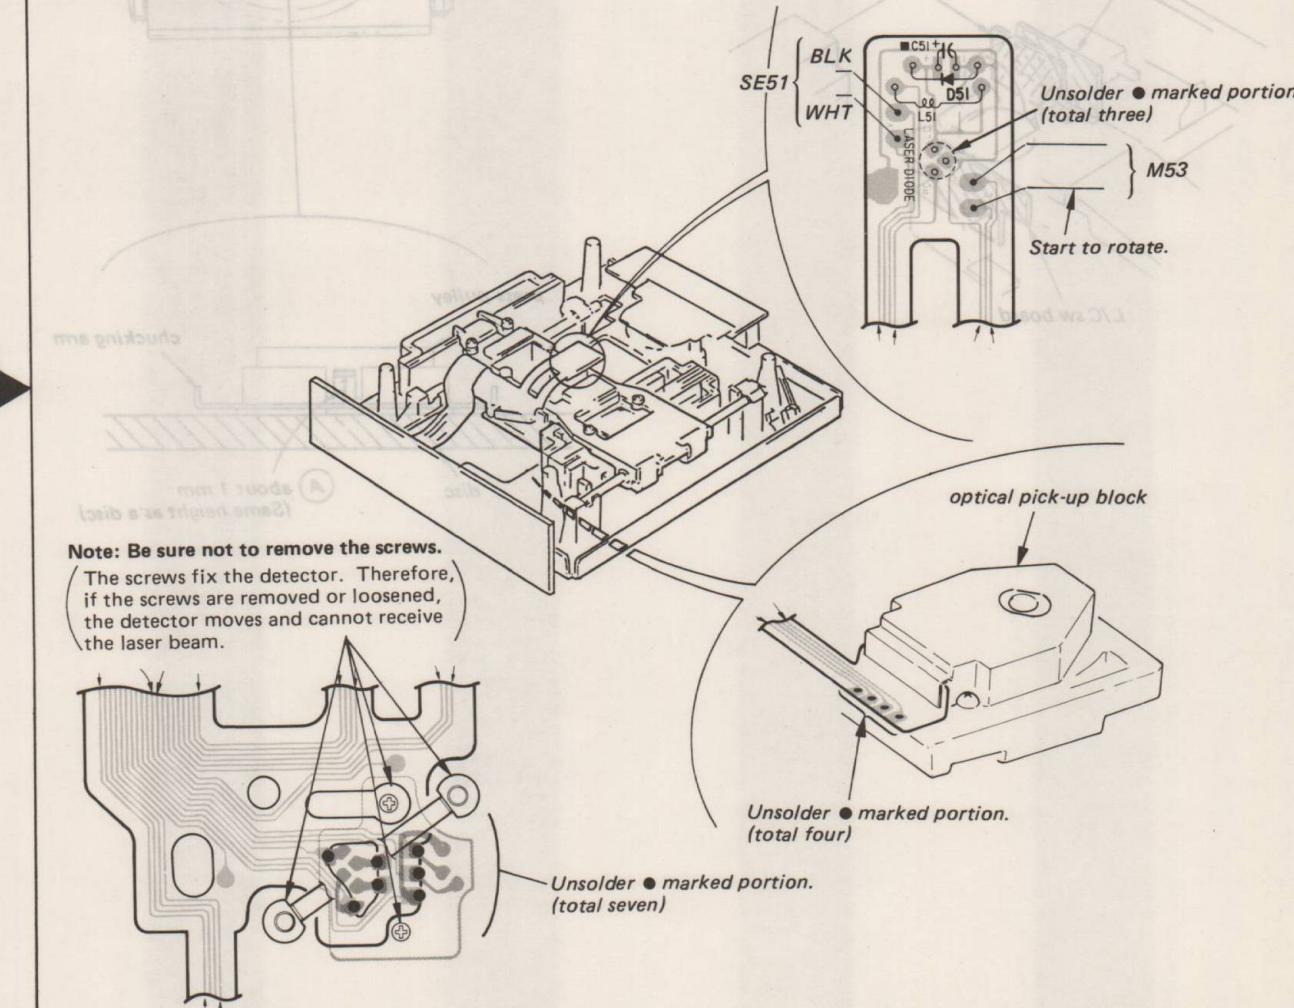

(See page 23.)

Refer to "NOTES ON HANDLING BASE UNIT (BU-1E)" on page 6 to prevent damage caused by static electricity.

**OPTICAL PICK-UP BLOCK****SLED COIL (M53), SENSOR COIL (SE51)**

①, ② : sensor coil (SE51)

③ ~ ⑥ : sled coil (M53)

**FLEXIBLE BOARD**

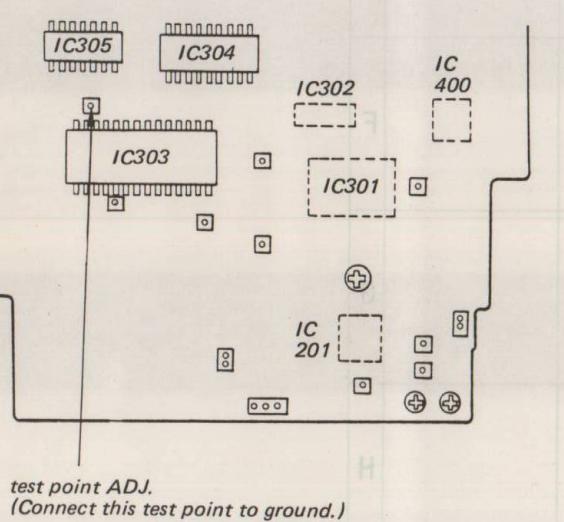

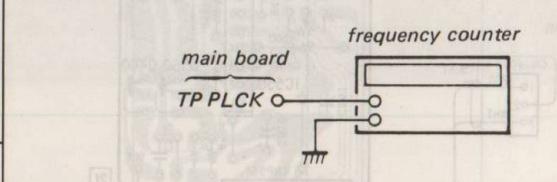

**3.2. ELECTRICAL ADJUSTMENTS**

1. Perform adjustments in the order given.
2. Use YEDS-18 disc (3-702-101-01) unless otherwise indicated.
3. Use the oscilloscope with more than  $10\text{ M}\Omega$  impedance.

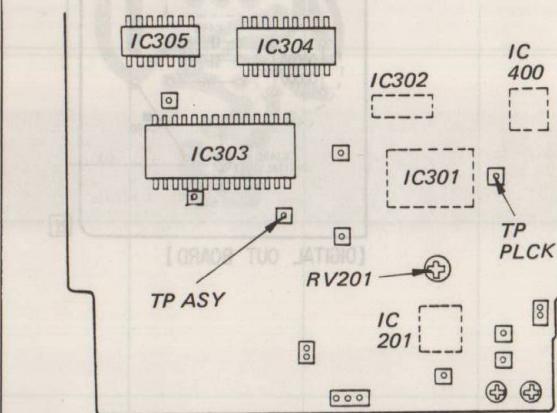

**Adjustment Mode**

1. Connect main board test point ADJ and ground. This is to prevent the disc table from opening even though pits are not read, by making microcomputer IC303 pin 38 low.
2. Turn POWER switch on. (To reset microcomputer.)

After adjustment, remove the lead wire connecting test point ADJ and ground.

**Adjustment Location: main board****RF PLL Adjustment****Procedure:**

1. Connect main board test point TP ASY and ground.
2. Connect the frequency counter to main board test point TP PLCK.
3. Turn POWER switch ON (stop mode).
4. Adjust main board RV201 so that the reading on frequency counter is  $4.3218\text{ MHz} \pm 20\text{ kHz}$ .
5. Remove the lead wire connecting in step 1.
6. Put disc (YEDS-18) in and press ▶ PLAY button.
7. Confirm that reading on frequency counter is  $4.3218\text{ MHz}$ .

**Adjustment Location: main board****REFERENCE****Focus/Tracking Gain Adjustment**

A frequency response analyzer is necessary in order to perform this adjustment exactly.

However, this gain has a margin, so even if it is slightly off, there is no problem. Therefore, do not perform this adjustment.

Focus/tracking gain determines the pick-up follow-up (vertical and horizontal) relative to mechanical noise and mechanical shock when the 2-axis device operate.

However, as these reciprocate, the adjustment is at the point where both are satisfied.

- When gain is raised, the noise when the 2-axis device operates increases.
- When gain is lowered, mechanical shock and skipping occurs more easily.
- When gain adjustment is off, the symptoms below appear.

| Symptoms  | Gain        | Focus       | Tracking |
|---|-------------|-------------|----------|
| ● The time until music starts becomes longer for STOP → ▶ PLAY or automatic selection (◀▶ buttons pressed.) (Normally takes about 1 seconds.) | low         | low or high |          |
| ● Music does not start and disc continues to rotate for STOP → ▶ PLAY or automatic selection (◀▶ buttons pressed.)                            | —           | low         |          |
| ● Disc table opens shortly after STOP → ▶ PLAY.   | low or high | —           |          |
| ● Sound is interrupted during PLAY. Or time counter display stops progressing.  | —           | low         |          |
| ● More noise during 2-axis device operation.  | high        | high        | high     |

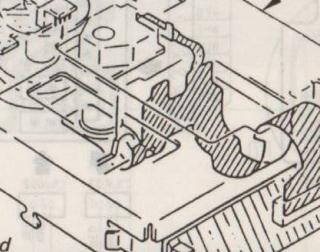

The following is a simple adjustment method.

**— Primary Adjustment —**

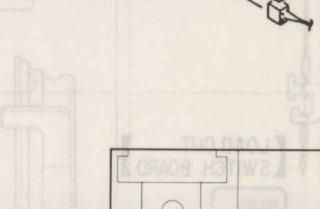

Note: Since exact adjustment cannot be performed, remember the positions of the controls before performing the adjustment. If the positions after the primary adjustment are only a little different, return the controls to the original position.

**6. Connect oscilloscope to main board TP TE.**

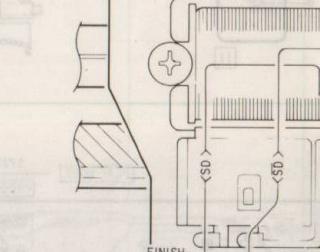

7. Adjust RV202 so that the waveform is as shown in the figure below. (tracking gain adjustment)

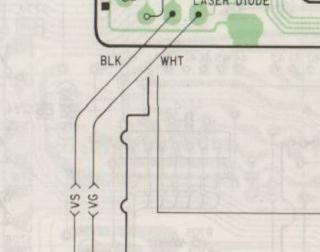

● Incorrect Examples (fundamental wave appears)  
low tracking gain

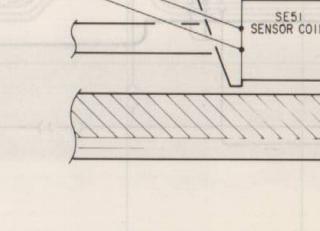

high tracking gain  
(higher fundamental wave than for low gain)

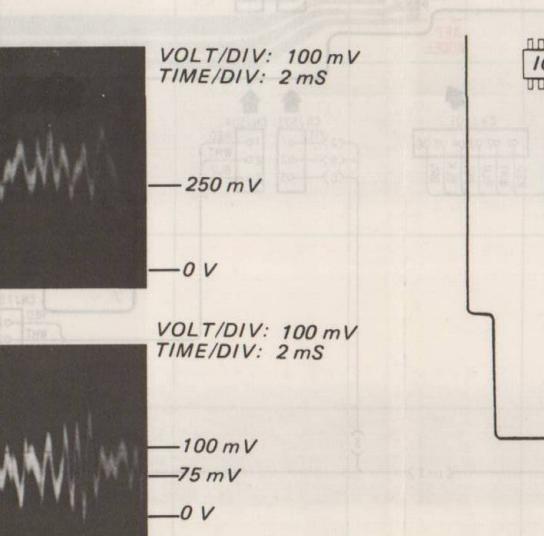

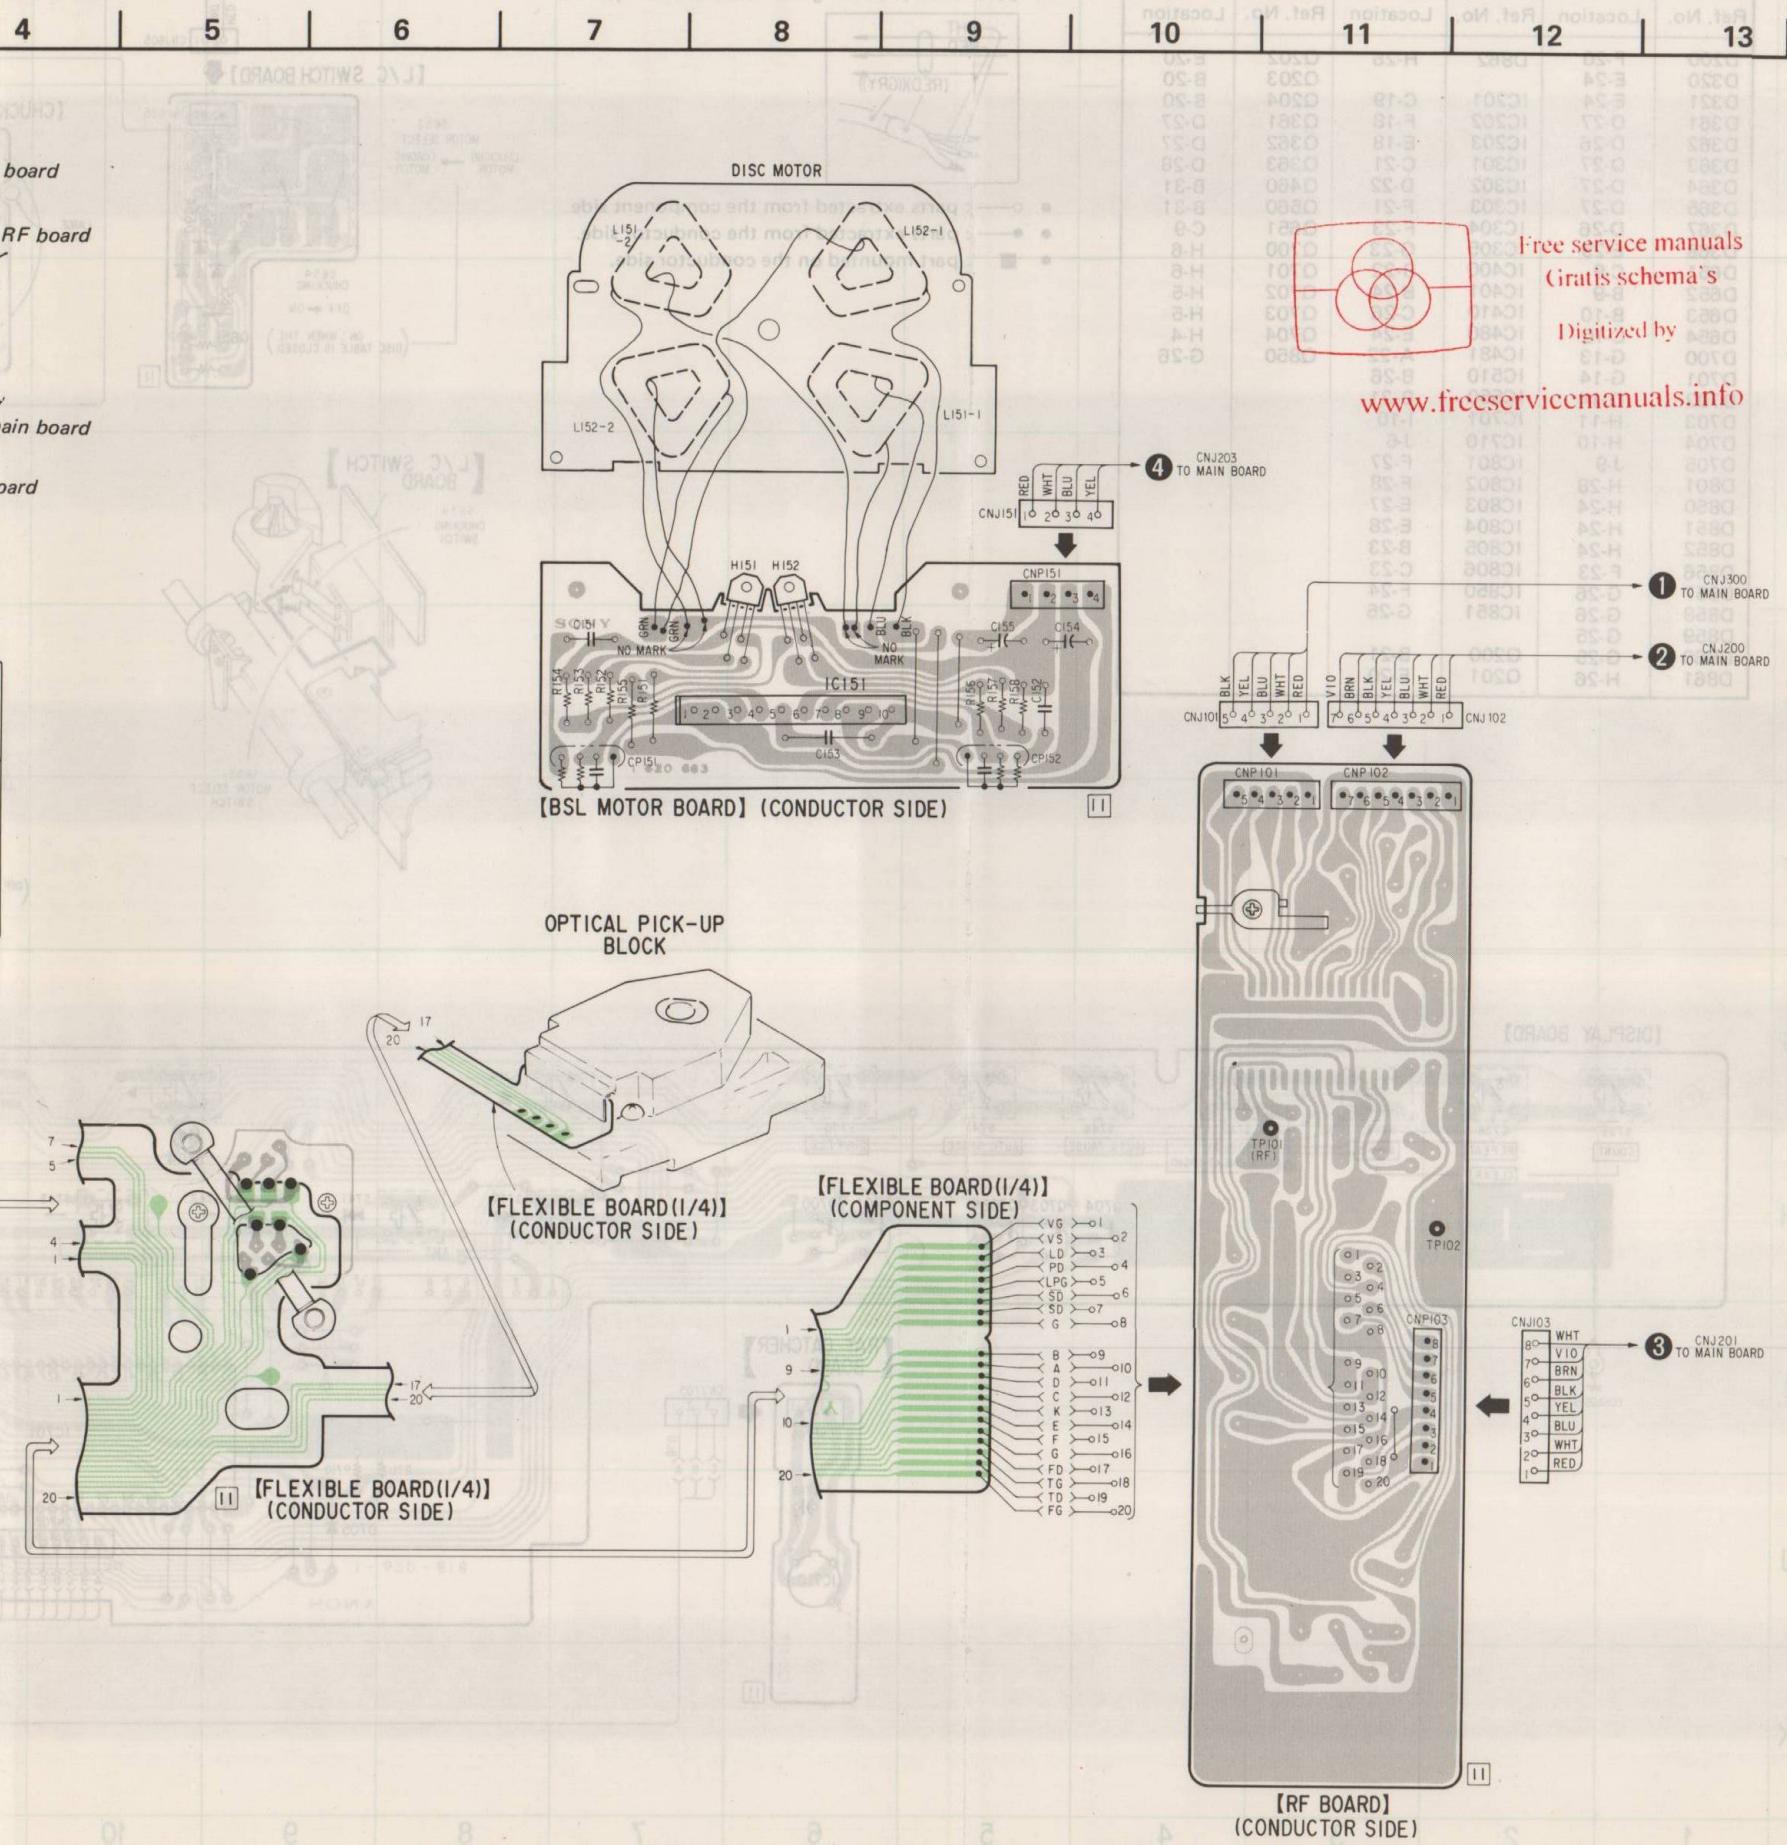

● Incorrect Examples (DC level changes more than on adjusted waveform)  
low focus gain

high focus gain

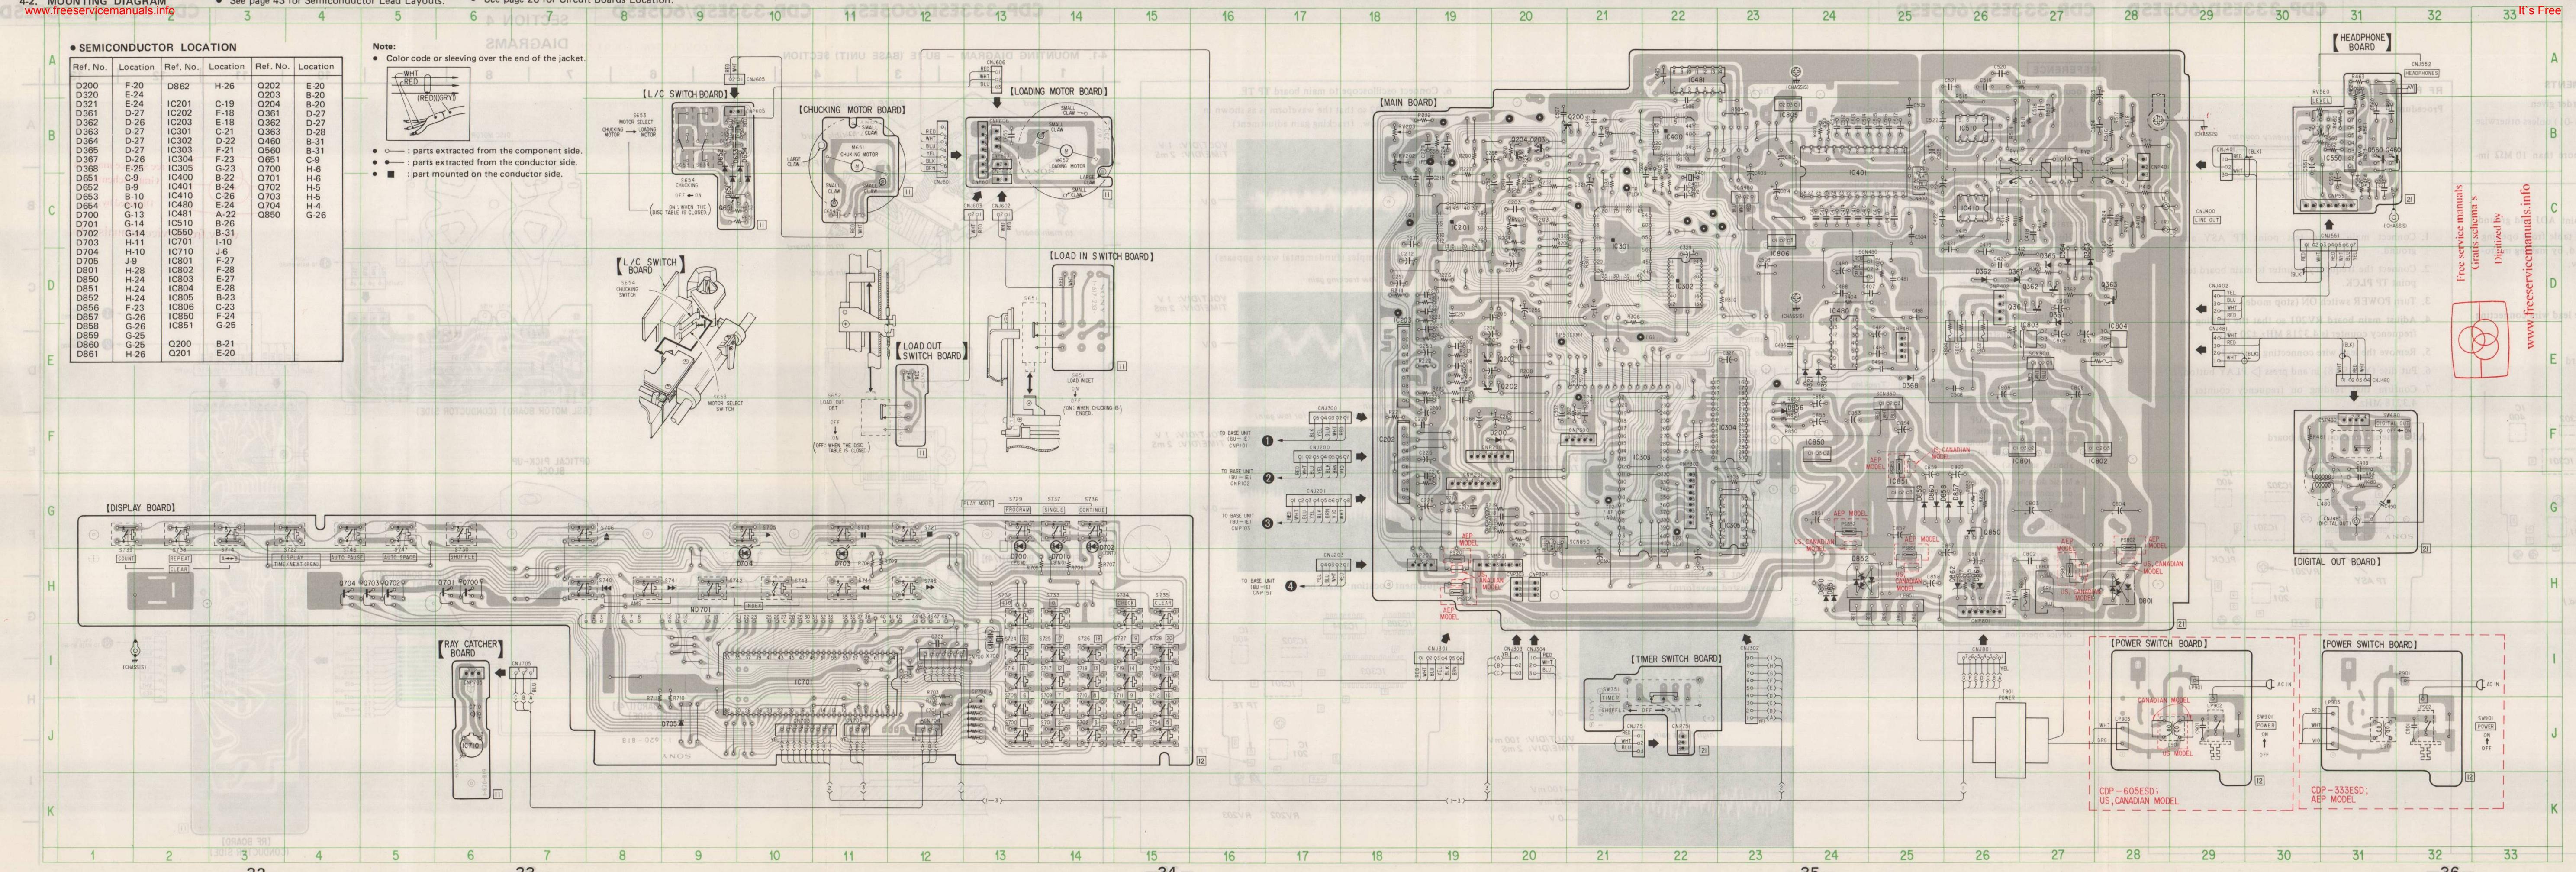

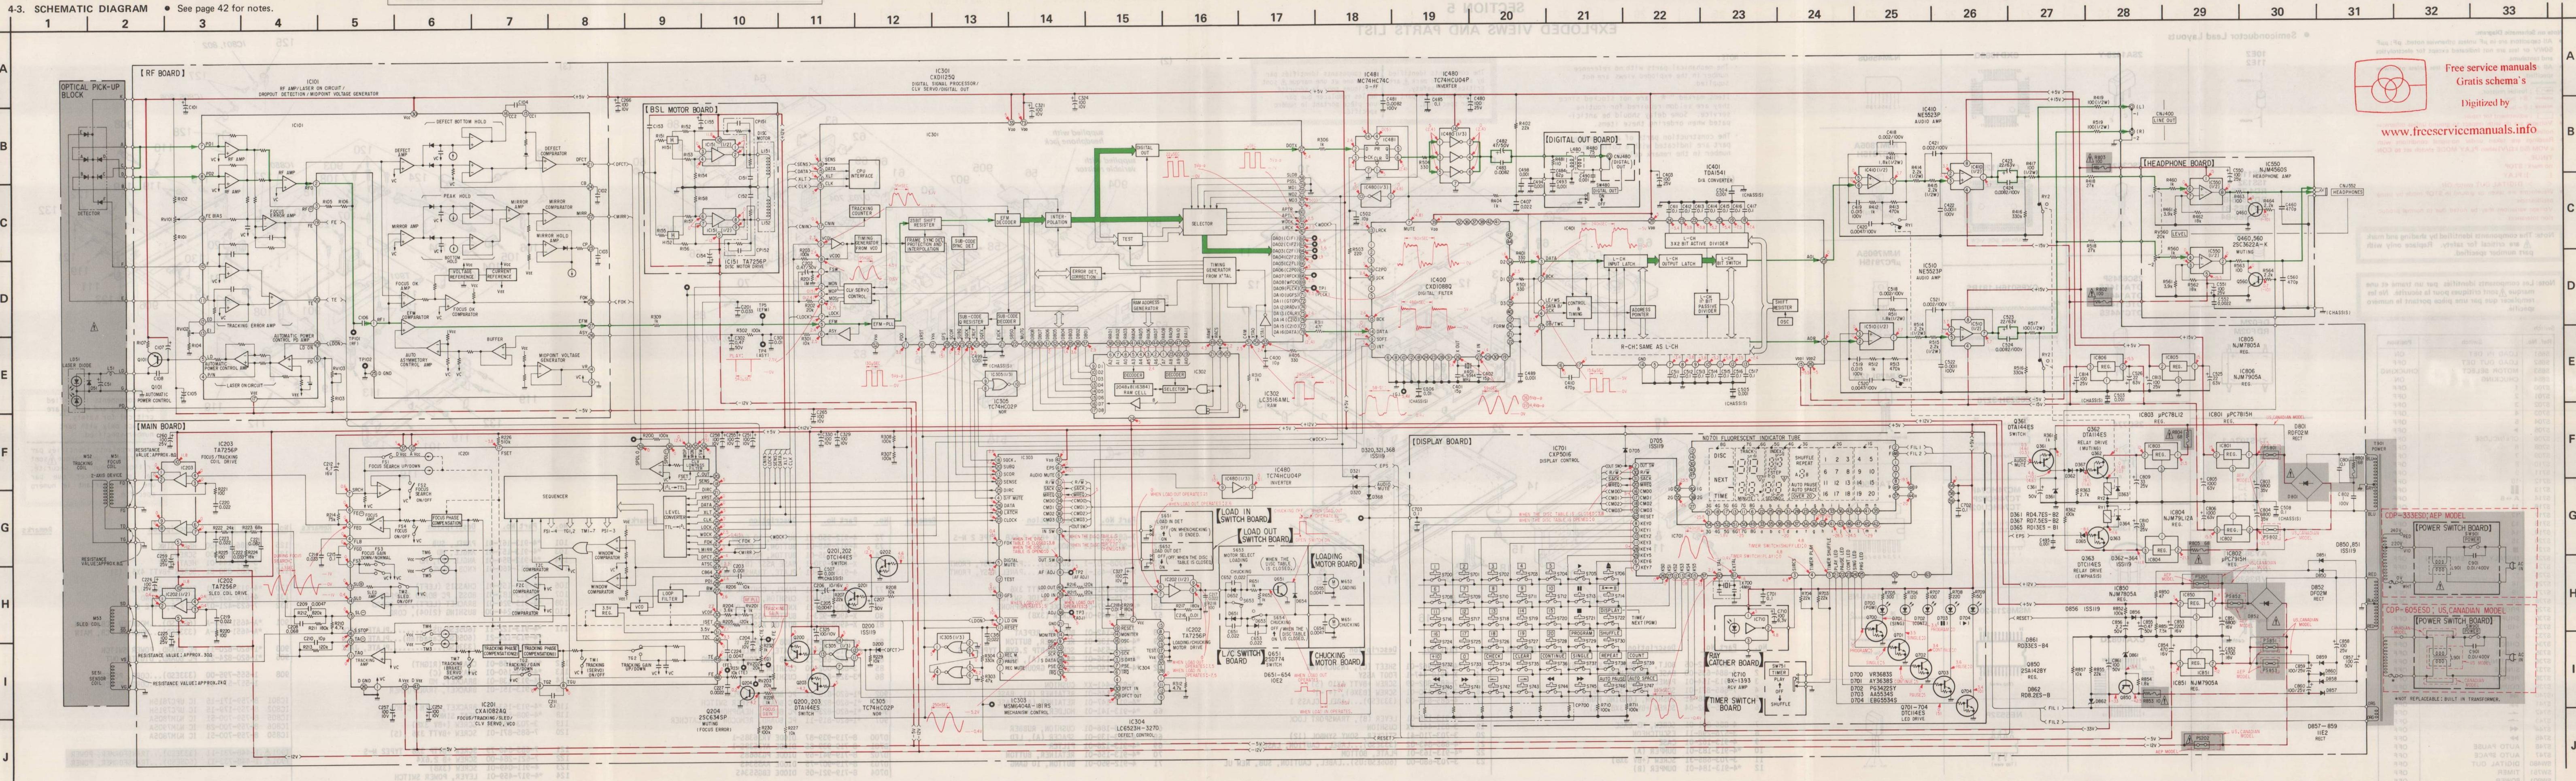

100 mV  
75 mV  
0 V

## SECTION 6

### ELECTRICAL PARTS LIST

**NOTE:**

- Items marked "★" are not stocked since they are seldom required for routine service. Some delay should be anticipated when ordering these items.
- If there are two or more same circuits in a set such as a stereophonic machine, only typical circuit parts may be indicated and capacitors and resistors in other same circuits may be omitted.

**CAPACITORS:**  
MF: $\mu$ F, PF: $\mu\mu$ F.

**RESISTORS**

- All resistors are in ohms.
- F : nonflammable

**COILS**

- MMH : mH, UH :  $\mu$ H

**SEMICONDUCTORS**

In each case, U :  $\mu$ , for example:  
UA... :  $\mu$ A..., UPA... :  $\mu$ PA..., UPC... :  $\mu$ PC,  
UPD... :  $\mu$ PD...

The components identified by shading and mark **▲** are critical for safety. Replace only with part number specified.

Les composants identifiés par une trame et une marque **▲** sont critiques pour la sécurité. Ne les remplacer que par une pièce portant le numéro spécifié.

The components identified by shading and mark **▲** are critical for safety.  
Replace only with part number specified.

Les composants identifiés par une trame et une marque **▲** sont critiques pour la sécurité.  
Ne les remplacer que par une pièce portant le numéro spécifié.
